

THE DIGITAL FUTURE OF PHARMACY

Technology advancements that will change how we care for patients.

OBJECTIVES

Review changes in health care delivery that likely impact pharmacy practice.

Describe current trends in contemporary pharmacy practice as they relate to interprofessional collaboration.

Discuss practice innovations designed to improve health outcomes.

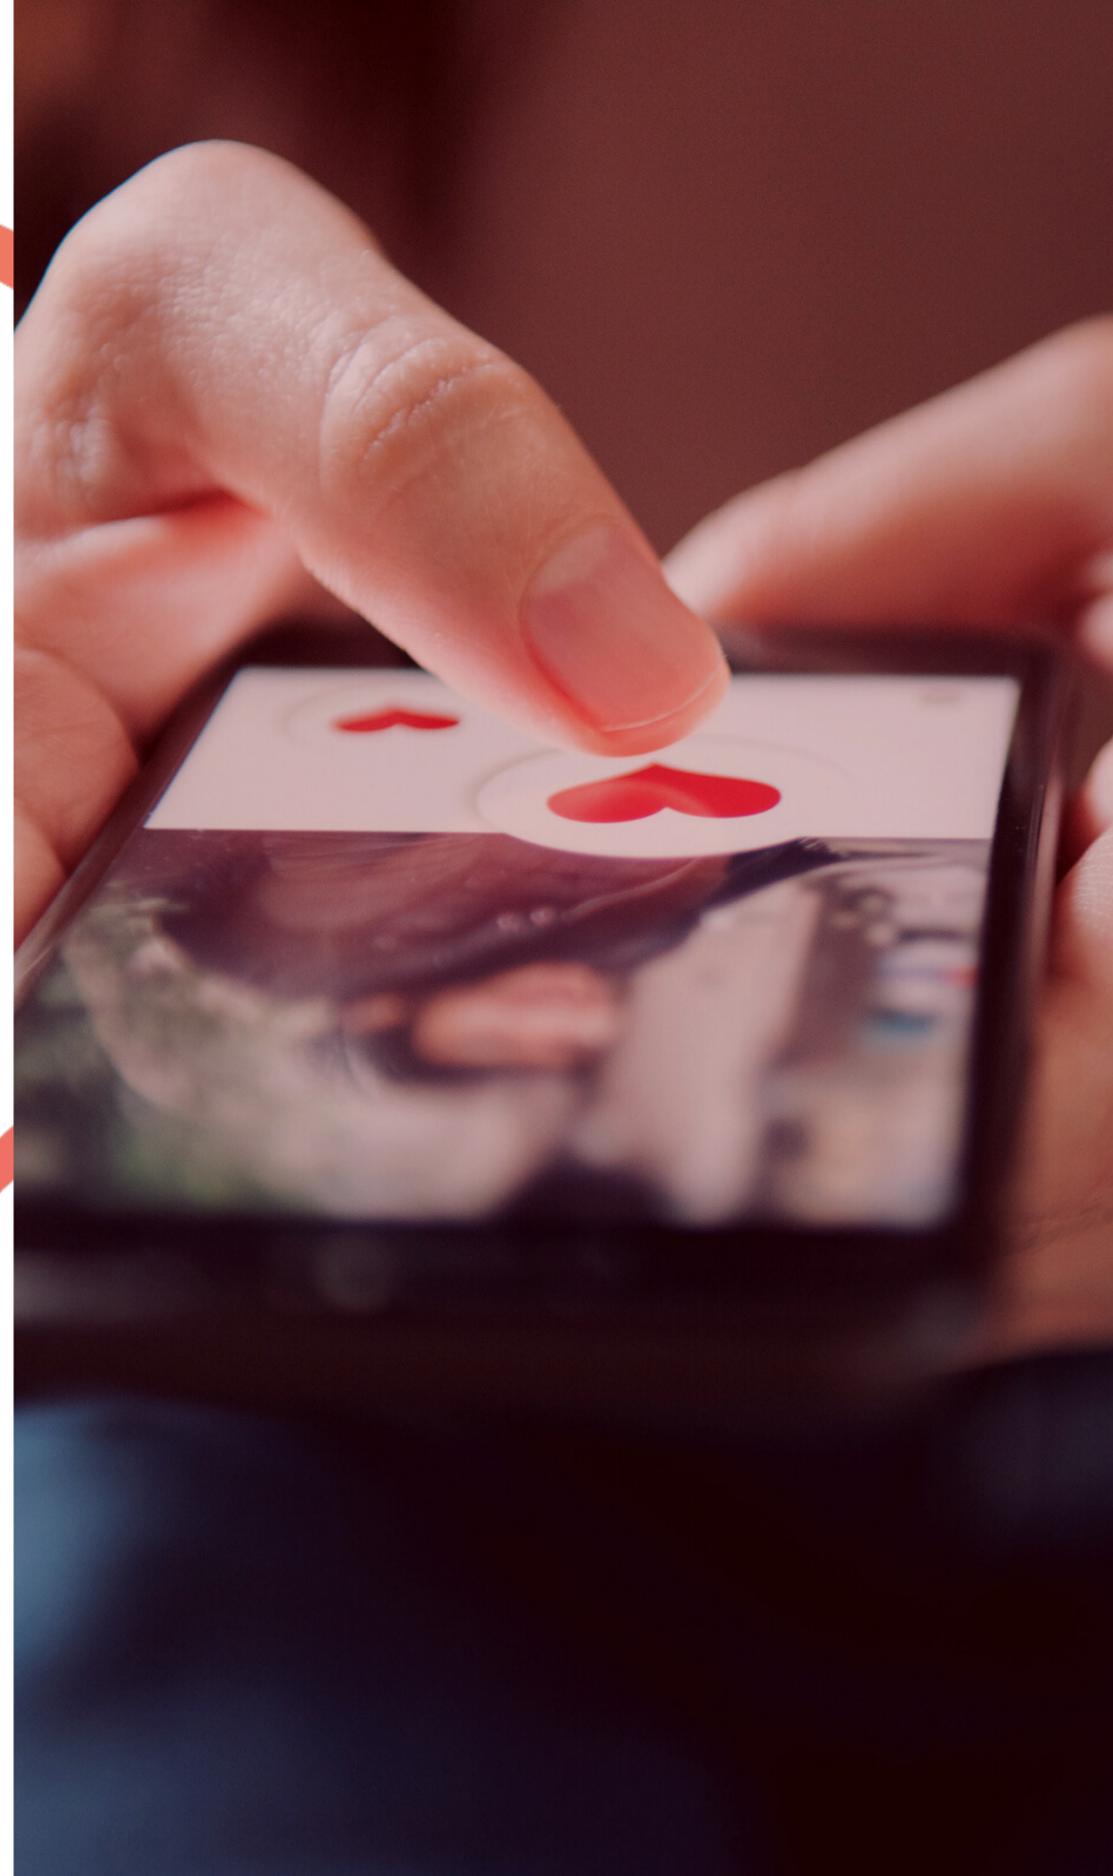

Discuss role delineation for pharmacists on the interprofessional health care team.

e world an
on a daily

WHAT CAN'T WE DO WITH TECHNOLOGY?

It can be presumed that rapid advancements will continue to outpace expectations. After all, what comes after the smartphone?

02

TECHNOLOGY
IS CHANGING
HOW PATIENTS
REGARD THEIR
HEALTHCARE

80%

PATIENTS NOW USE THE INTERNET TO
LOOK UP HEALTH INFORMATION.

42%

OF ADULTS ENGAGE IN DIGITAL
HEALTH TRACKING.

>50% **27.5%**

Of patient submitted videos on medication usage were found preferential for viewing...

But injection instructional videos uploaded to YouTube had misleading information based on clinical review.

PATIENTS WOULD RATHER USE **YOUTUBE** THAN TALK TO A PROVIDER

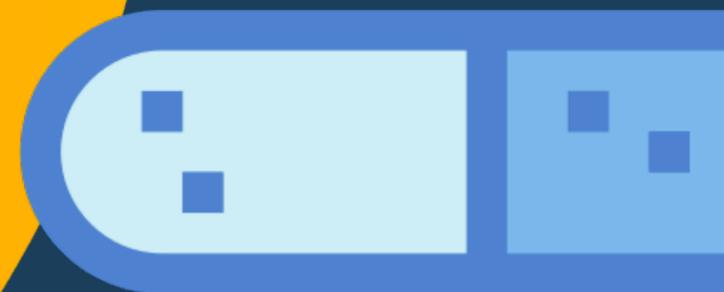

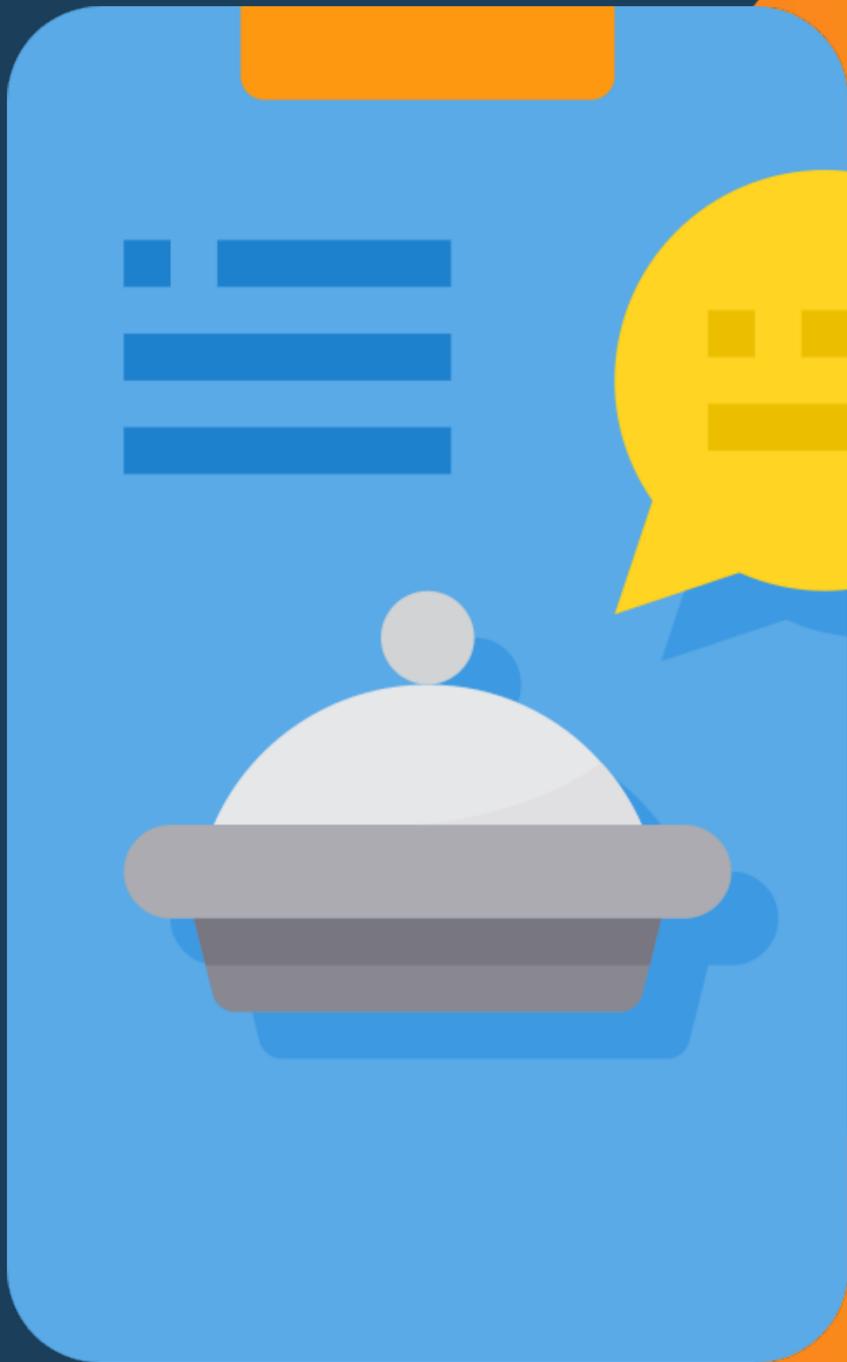

Rittberg R, et al. Clin Rheumatol. 2016;35(5):1329–1333.
Tolu S, et al. Rheumatol Int. 2018;38(7):1285–1292.

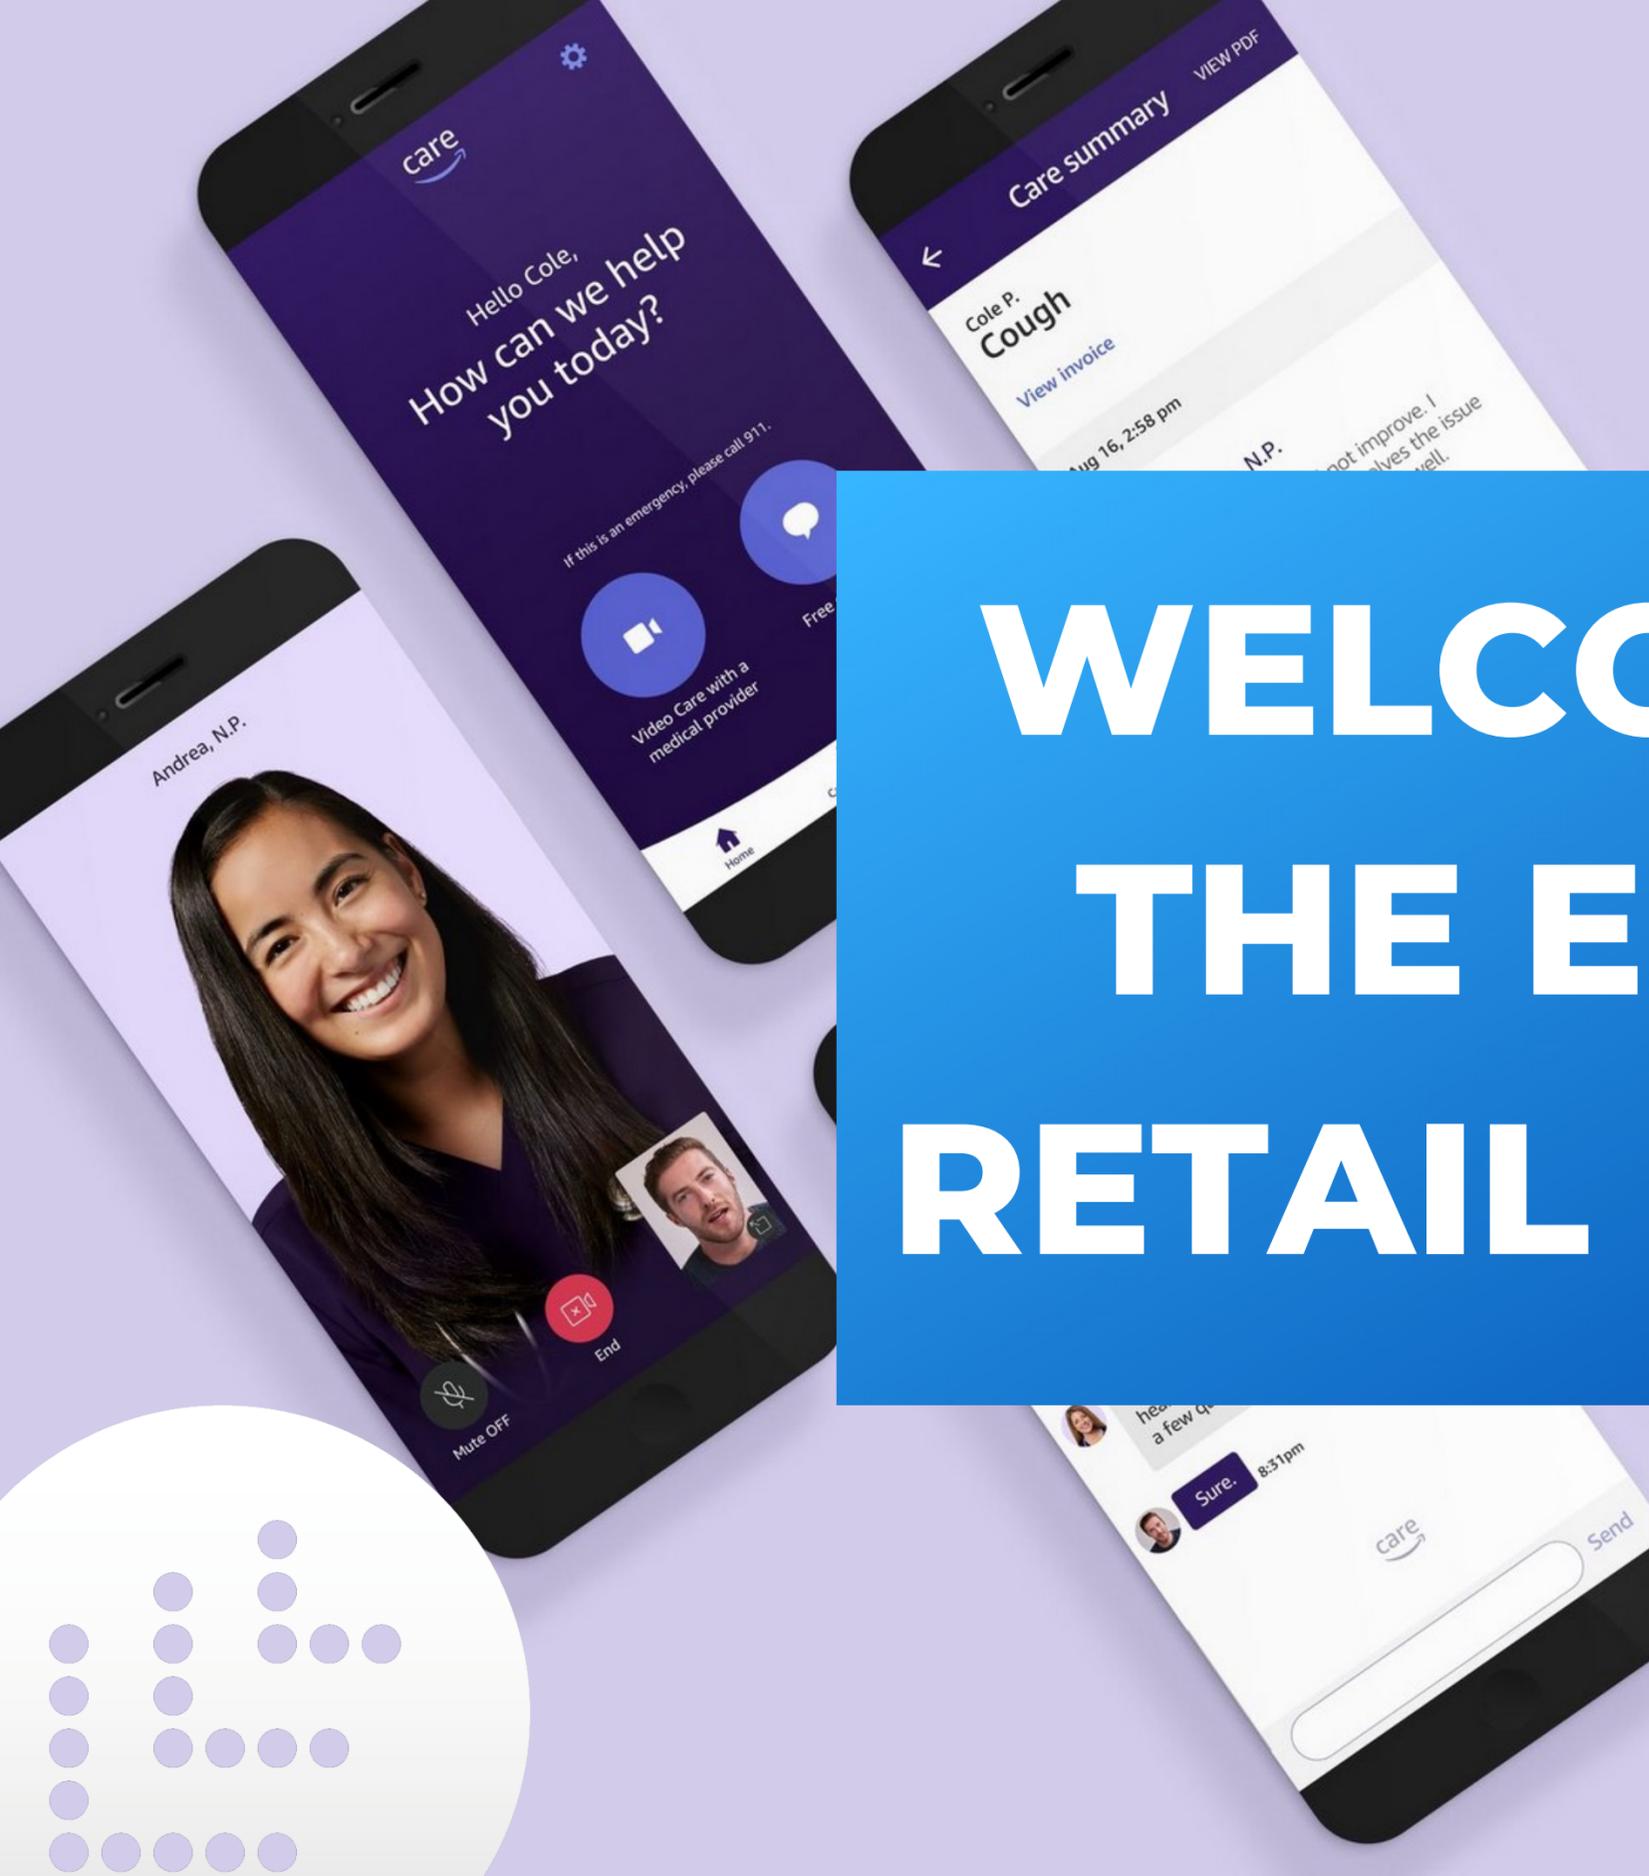

PATIENTS ARE NOW CONSUMERS OF HEALTH.

Patients recognize there are a plethora of services offered via apps and online companies aiming to make access to healthcare more convenient and transparent compared to traditional healthcare players initiatives.

**IF I CAN
ORDER FOOD
ON THE GO,
WHY NOT MY
MEDICATIONS?**

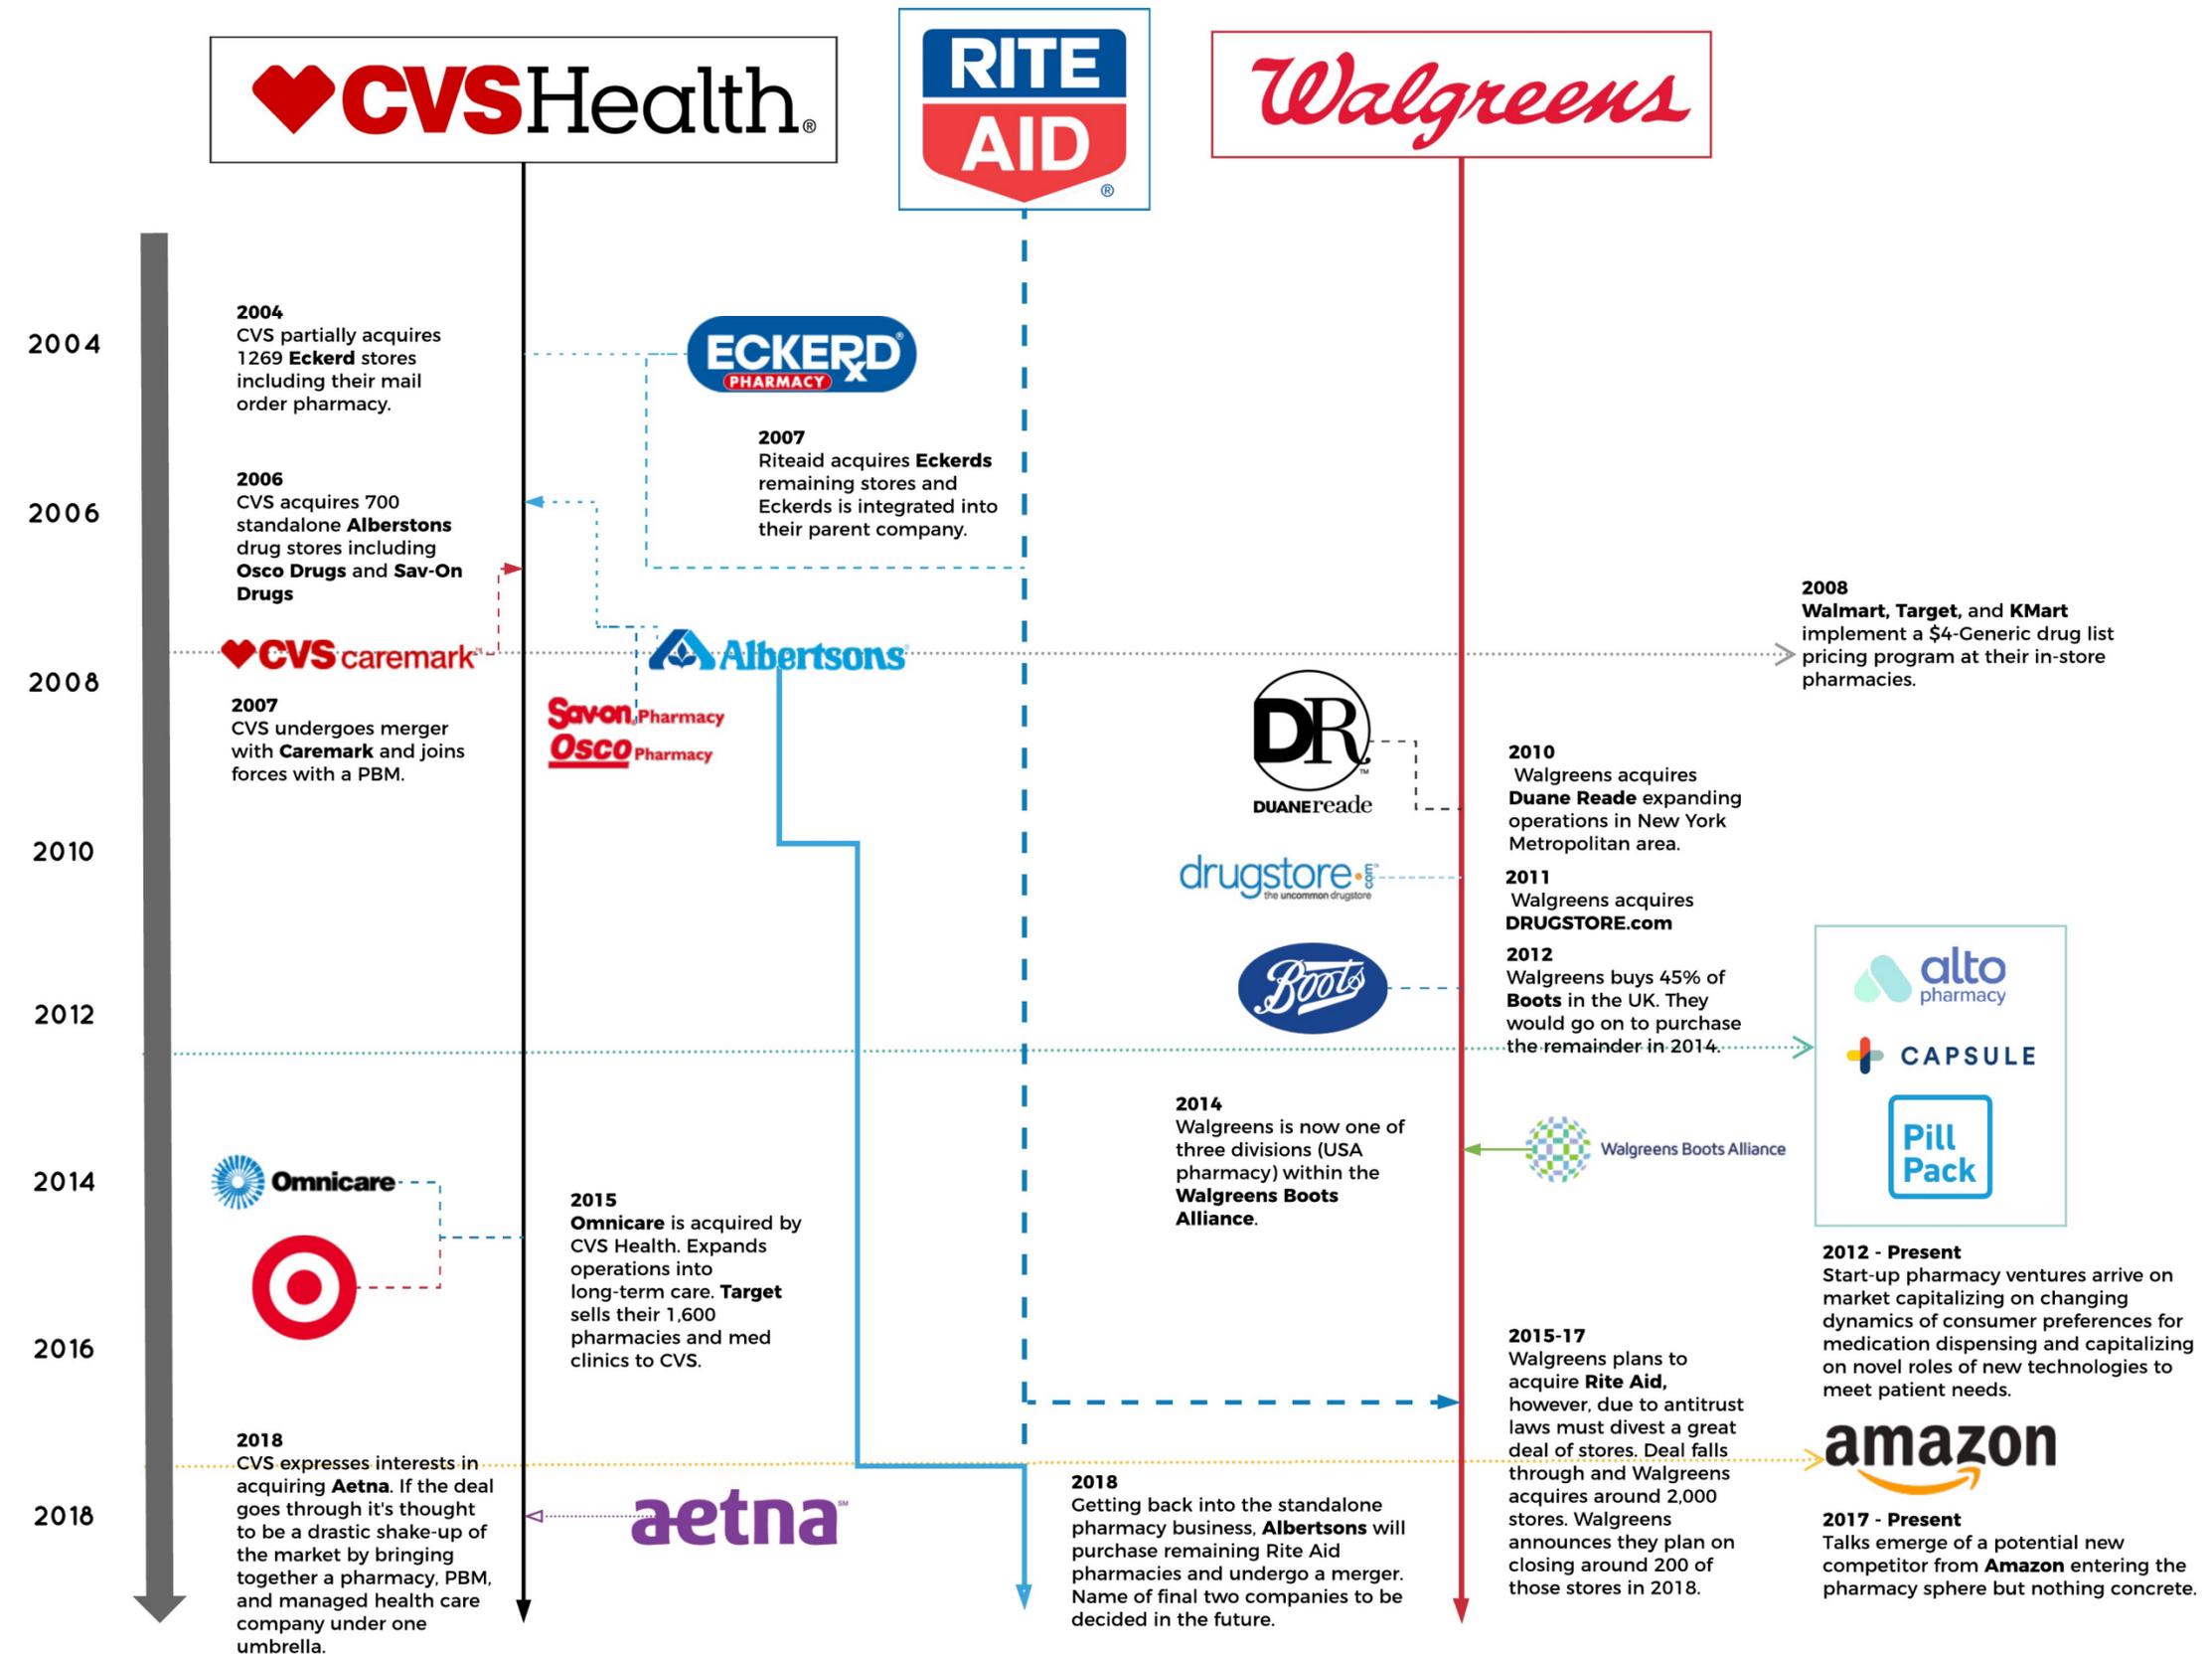

WELCOME TO THE ERA OF RETAIL HEALTH

Pharmacy companies will continue to expand and offer a 'consumer' first model.

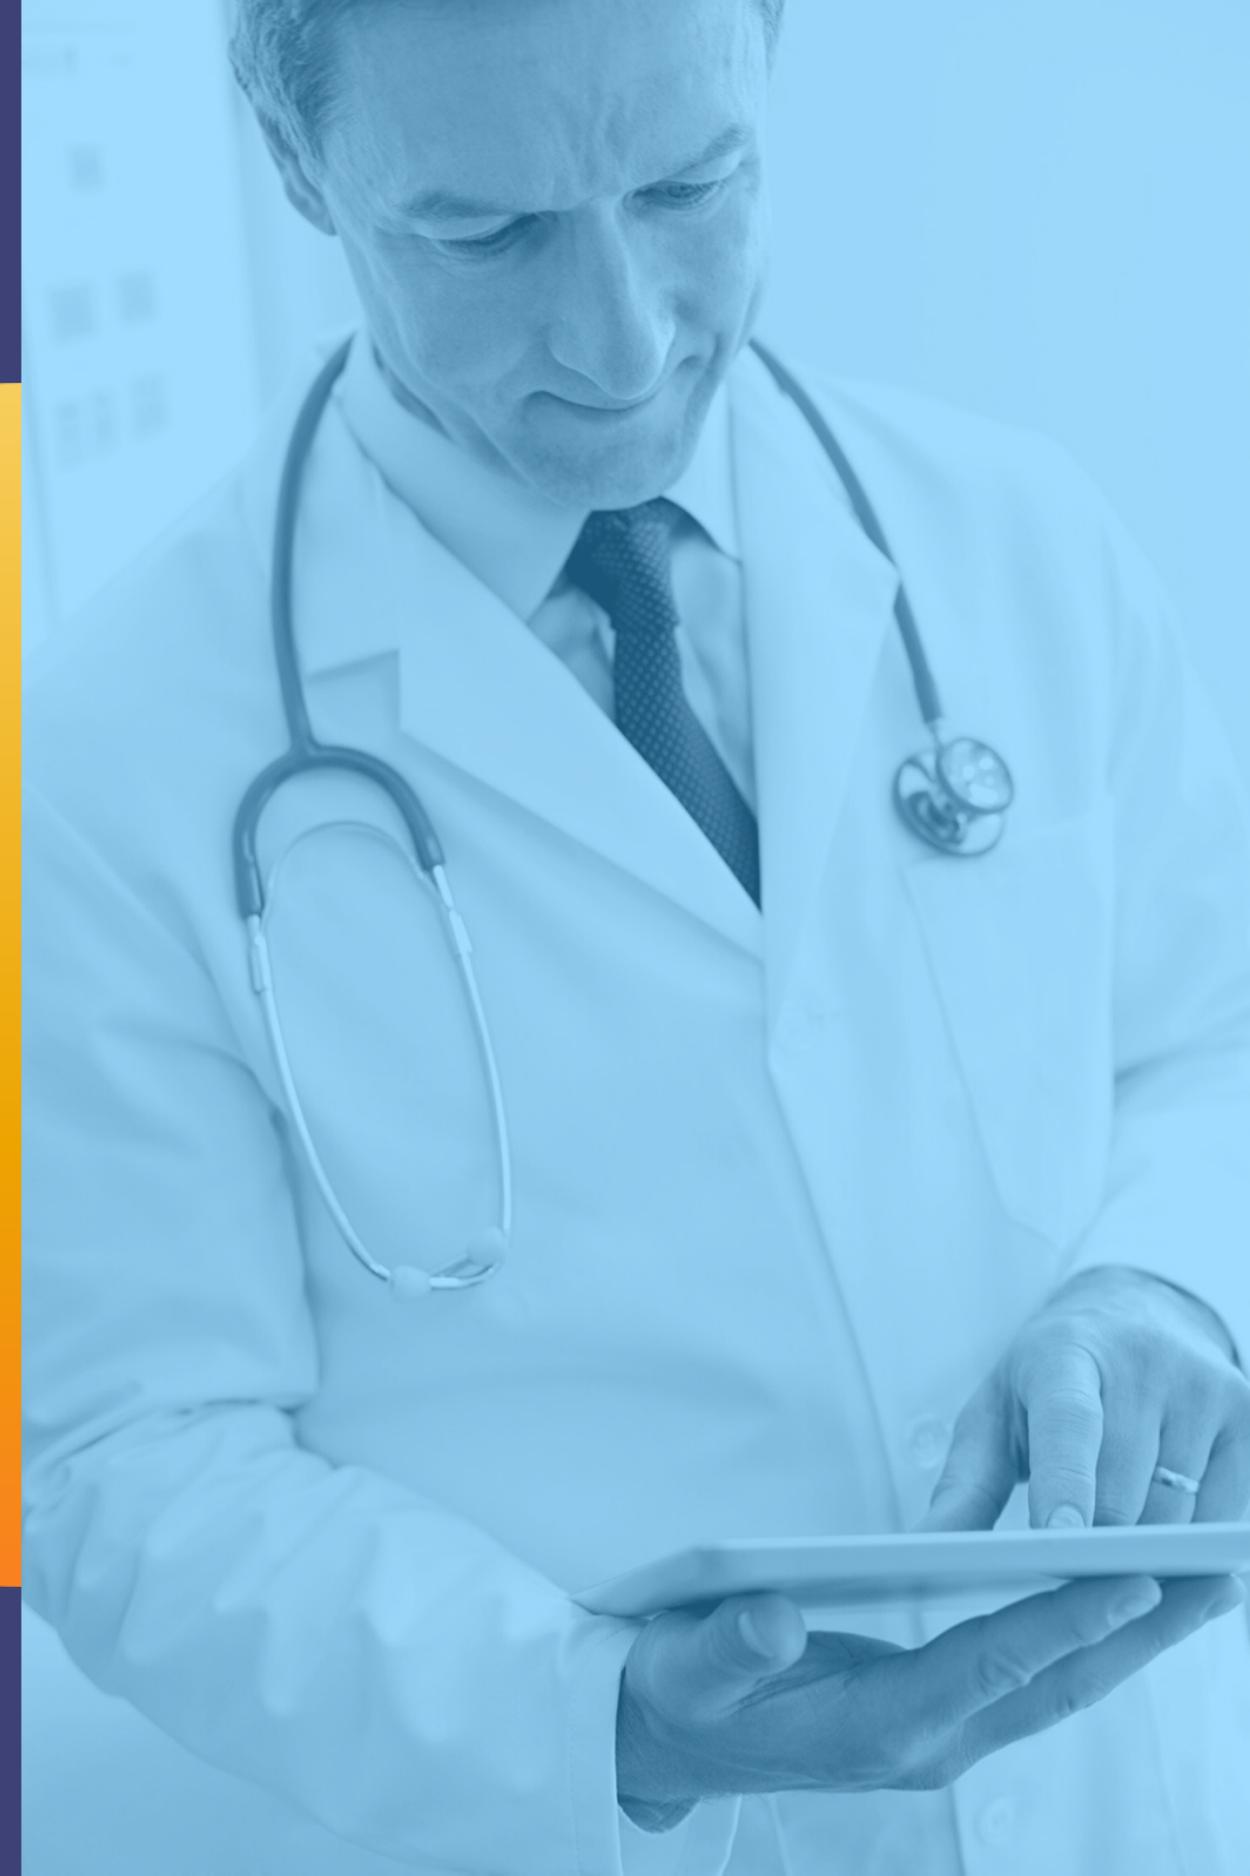

**Patients now have
access to over 20
online Direct-To-
Consumer
Prescription
Services**

**THE CONVENIENCE
TO ACCESS OUR
HEALTH ON OUR
OWN TERMS IS KEY
TO THE FUTURE OF
HOW CARE IS
DELIVERED**

03
THIS IS
THE ERA
OF
DIGITAL
HEALTH

WHAT DOES DIGITAL HEALTH MEAN?

01

Sensors

Wearables, IOT enabled devices, and general approach to collecting data in realtime from use. Can be devices or directly from the body.

02

Mobile Apps

Apps are ubiquitous, but no more so than those that users have come to trust every day. These are becoming evidence based and gaining FDA clearance.

03

Telehealth

Reaching patients where they are remotely through devices and smartphones and computers may lower the logistical issues facing many for health needs.

04

Artificial Intelligence

Processing the sheer amount of data coming from all the devices and wearables and health records is imposing but possible with analytical engines.

05

Voice Assistants

Using voice to reach users directly aside from direct touch will likely supplant the need for patients to be always directly responsible for performing actions.

06

Robotics & Automation

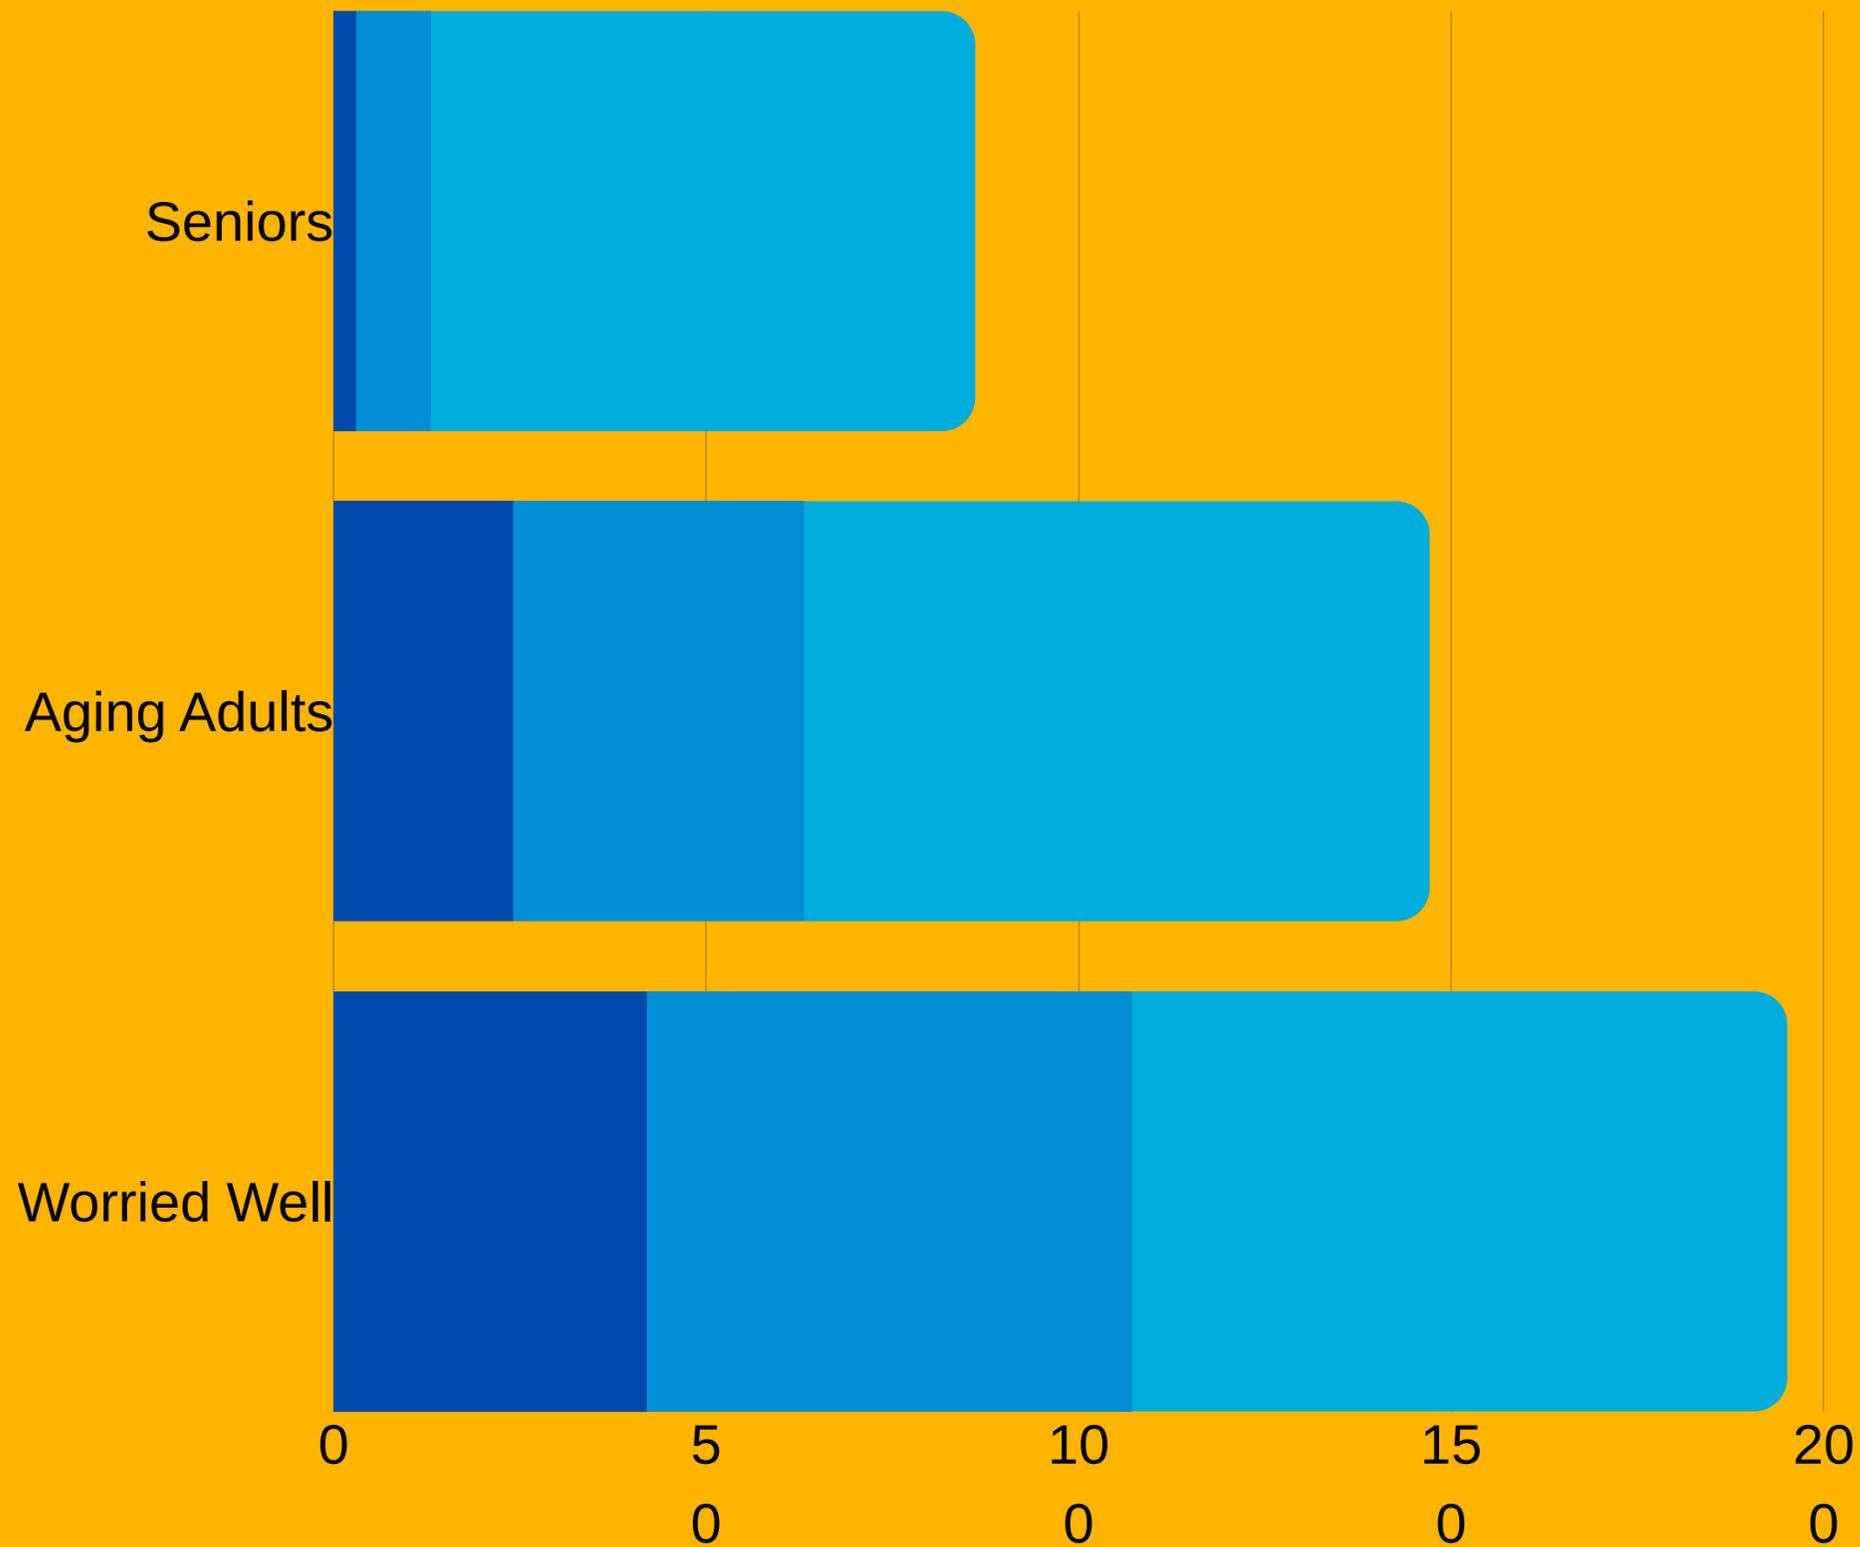

Using automation with robotics and AI can pose a novel means to conduct services traditionally done by humans.

30%

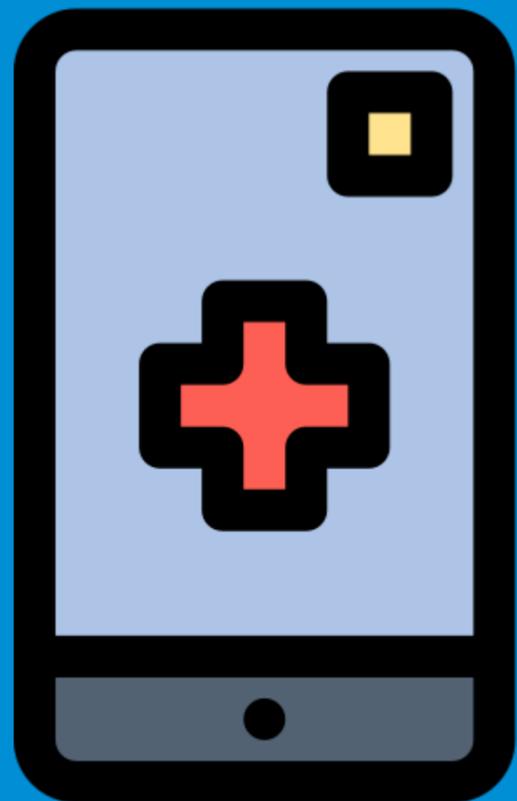

Of patients now use a wearable health device on a daily basis.

**SENSORS FOR REALTIME
PATIENT ASSESSMENT ARE
NOW KEY TO CARE.**

APPLE HEART STUDY

PEREZ MV, ET AL. N ENGL J MED. 2019;381(20):1909–1917.

Over 400K patients enrolled over 8 months, with over 2000 patients notified of a irregular pulse. A positive predictive value of 0.84 was found with ECG confirmation. Future studies will likely look towards utilizing wearables such as the Apple Watch in RCTs.

We are now exploring the use of EKG measurement to track blood glucose and potassium measurements in real time.

MIHAELA PORUMB, ET AL. SCIENTIFIC REPORTS, 2020; 10 (1)
GALLOWAY CD, ET AL. JAMA CARDIOL. 2019;4(5):428–436.

04

TECHNOLOGY
IS CHANGING
THE
APPROACH TO
MEDICATION
MANAGEMENT

**MEDICATIONS ARE
AN AREA OF HIGH
INTEREST FOR
DISRUPTION**

CHANGING HOW WE THINK ABOUT ADHERENCE

Adherence is at most subjective based on patient reported adherence rates or by using data collected from billing data...

**But can we go
beyond that with
Digital Health?**

DIGITAL HEALTH MEDICATION ADHERENCE COMPANIES

What technology is available and how are they doing it?

Using a smart phone camera, these companies can help watch a patient take their medication virtually to check adherence.

VIRTUALLY OBSERVED THERAPY (VOT)

sureAdhere

emocha
MOBILE HEALTH INC.

AiCure

Devices or dispensers that help organize medications and dispense to patients. These may integrate blister packed or strip packaged medications as well.

SMART PILL ORGANIZERS

vaica **elliegrid** **pilldrill** **livi**

MedMinder **MedSentry**

tricella **MedaCube** **HERO**

pillpresso **evondos** **my-uBox** **TINYLOGICS** **karie**

Behavioral economics or gamification apps that reward patients for their medication adherence.

PATIENT REWARD SYSTEM

wellth **perx** health

Mango Health

SEMPRE HEALTH **HealthPrize** Technologies

Sensors that attach to a pill bottle or a whole complete unit that can detect when a medication is removed to track adherence.

SMART PILL BOTTLES

AdhereTech **DoseSmart**

NantHealth **pilsy** **SMRT.**

TimerCap **medikyu** **+N TENT SOLUTIONS™**

Sensors that enable inhaled medications to track their use in real-time by measuring actuation.

SMART INHALERS

adherium **coherc health**

Propeller

CONNECT'INH **amiko**

Devices or sensors that attach to blister pack medications to track adherence.

BLISTER PACK DEVICES

CuePath Innovation

Aavia

Products that attach as sensors to injectable medications or help streamline the adherence measurement of disposable injectables.

SMART INJECTABLE DEVICES

COMMON SENSING **YPSOMED** **BIOCORP**

insulog **smartplus** **Companion Medical** **insulcloud**

DIABNEXT **Emperra** **HEALTH BEACON** **pendiq**

INNOVATION ZED **Digital Diabetes Care**

Home units that dispense medications to patients but also integrate other features such as teleservices or use alternative services to help patients care for themselves.

HOME ASSISTANT PILL DISPENSER

spencer health solutions **Omcare**

MediPENSE

Catalia Health **pillo**

Sensors that are taken alongside a medication to track objective adherence based on detection of ingestion.

BIOINGESTIBLE SENSORS

proteus DIGITAL HEALTH

etectRx

WHERE'S THE MOBILE APPS?
The bottom line is there are many to include here. Several companies I listed in patient reward systems, but I could have included others like **MediSafe** as well. Nonetheless, I recommend the research by Dayer and colleagues alongside others to see what apps are on the market.

Lilly and Novo Nordisk both will release smart insulin pens shortly (2019 est), while Bayer has created a smart injectable device (Betaconnect)

Teva has released their **Digihaler** system which is based on their acquisition of Gecko Caps early in 2000's. This enables tracking of actuations by a patient, but also measuring inspiration flow.

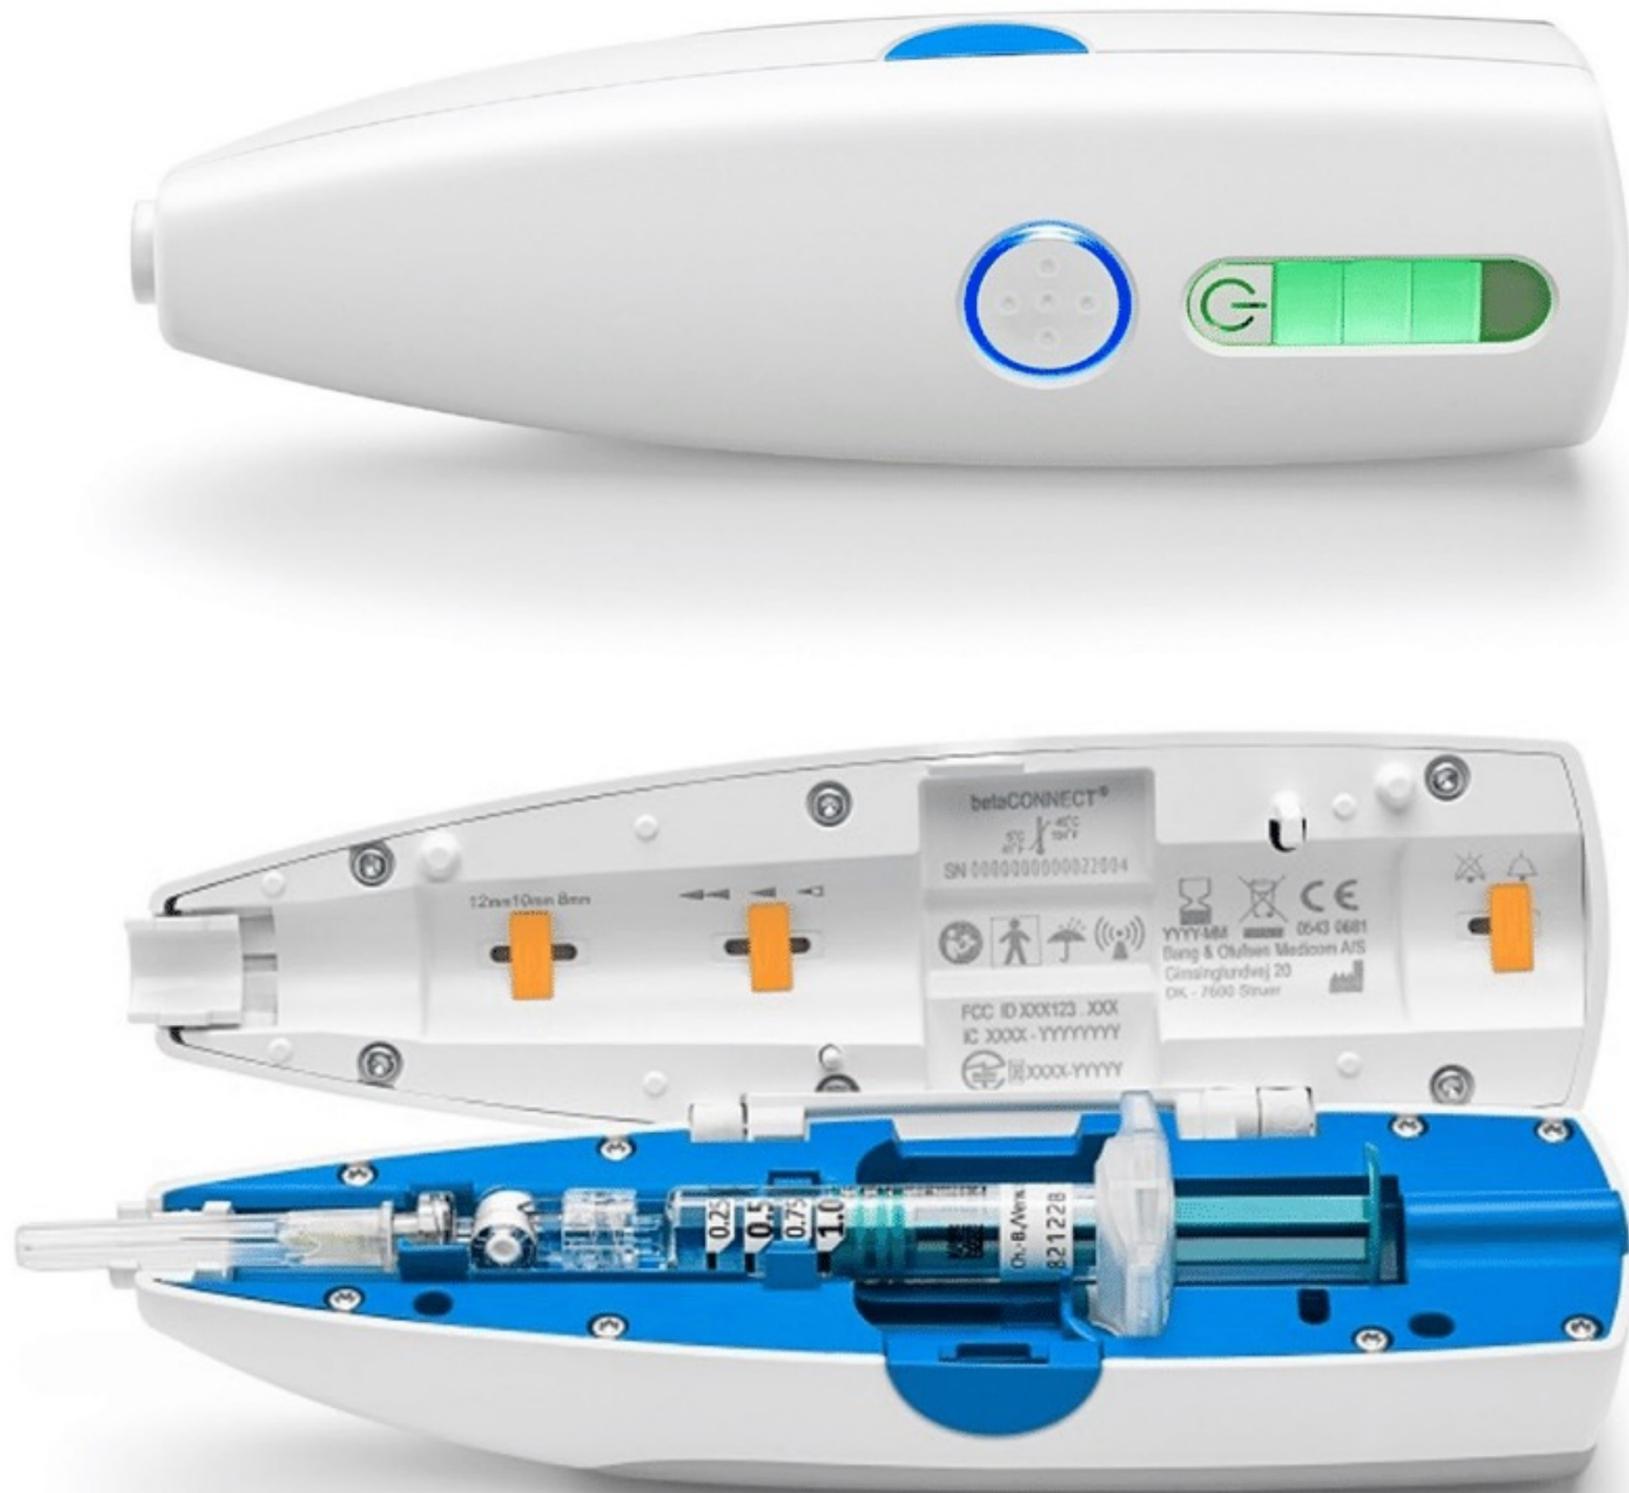

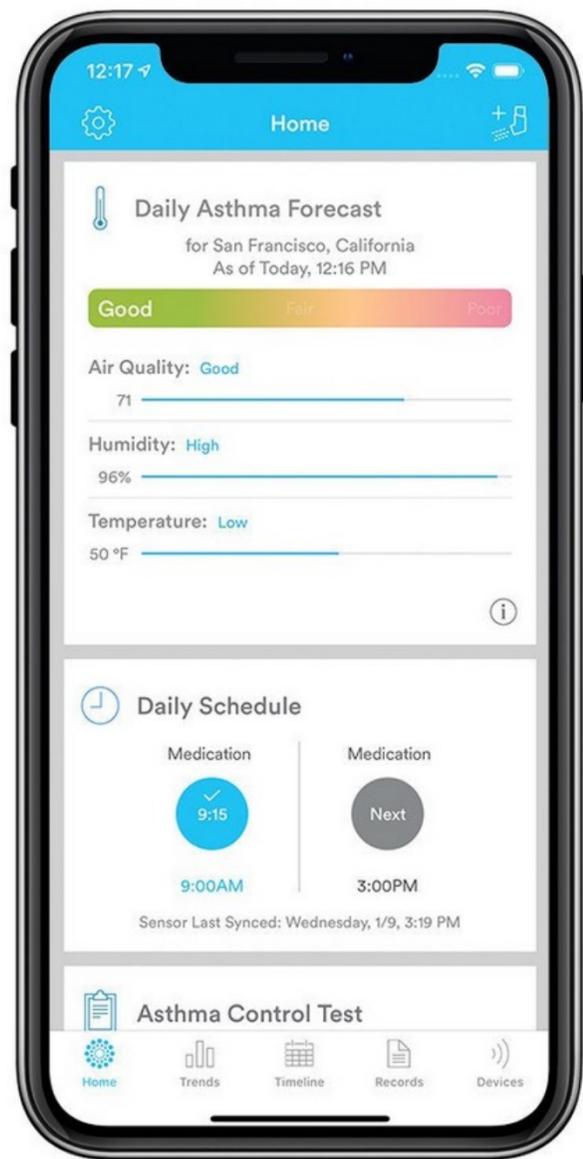

Otsuka has worked with **Proteus** to create the first smart oral medication on the market, **Abilify Mycite**. Other drugs are likely to come to the market shortly.

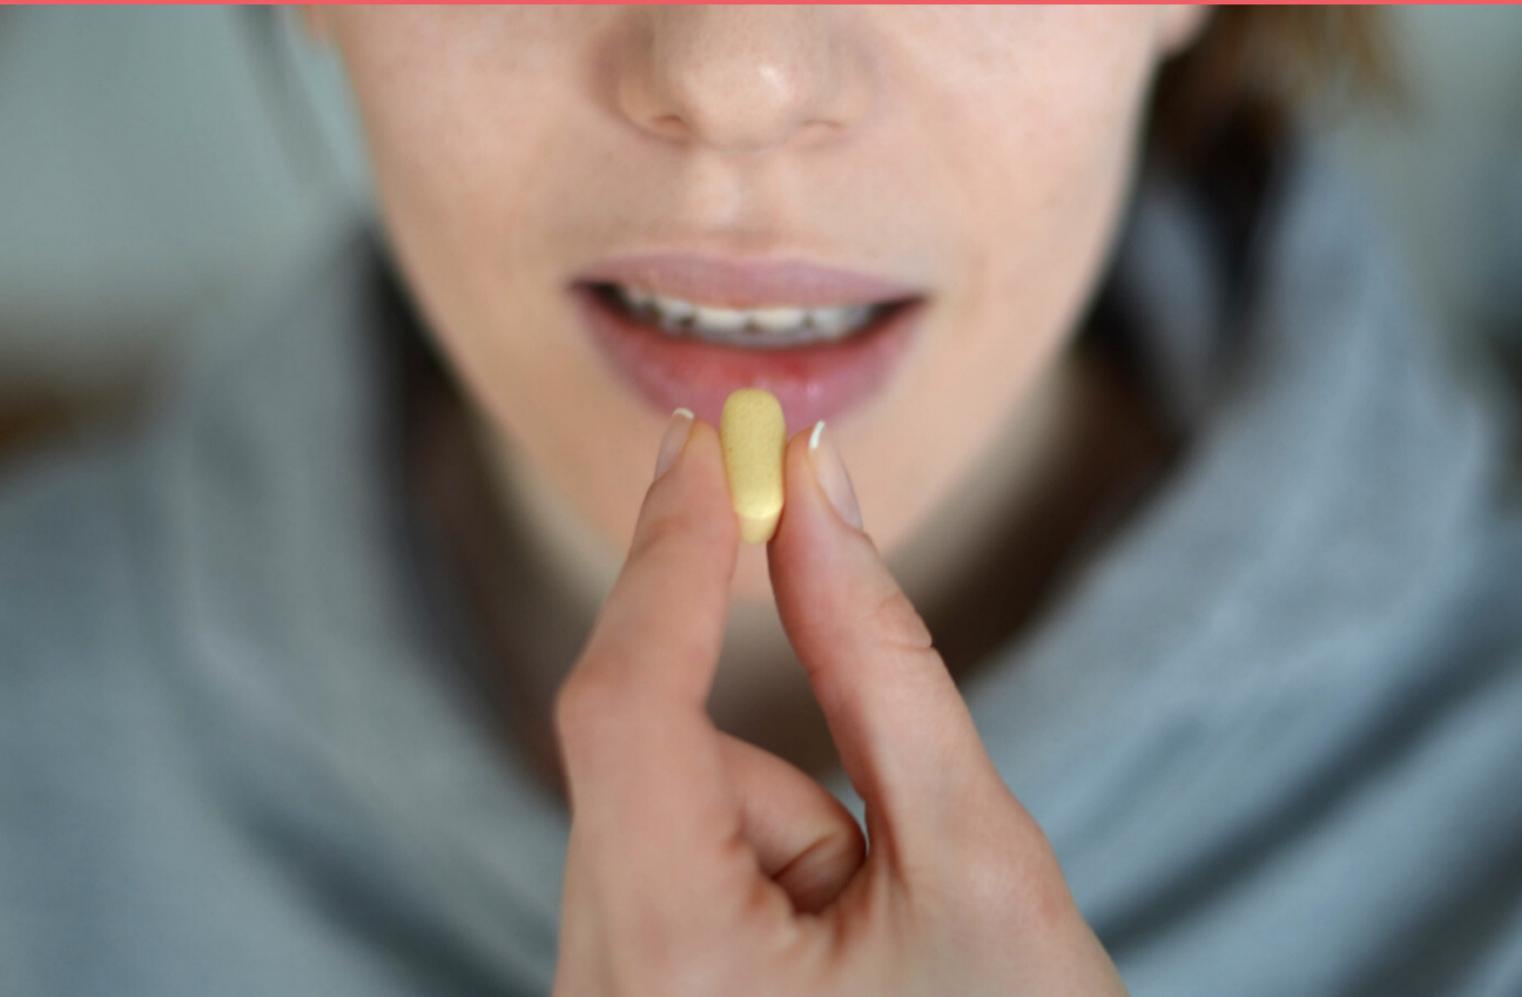

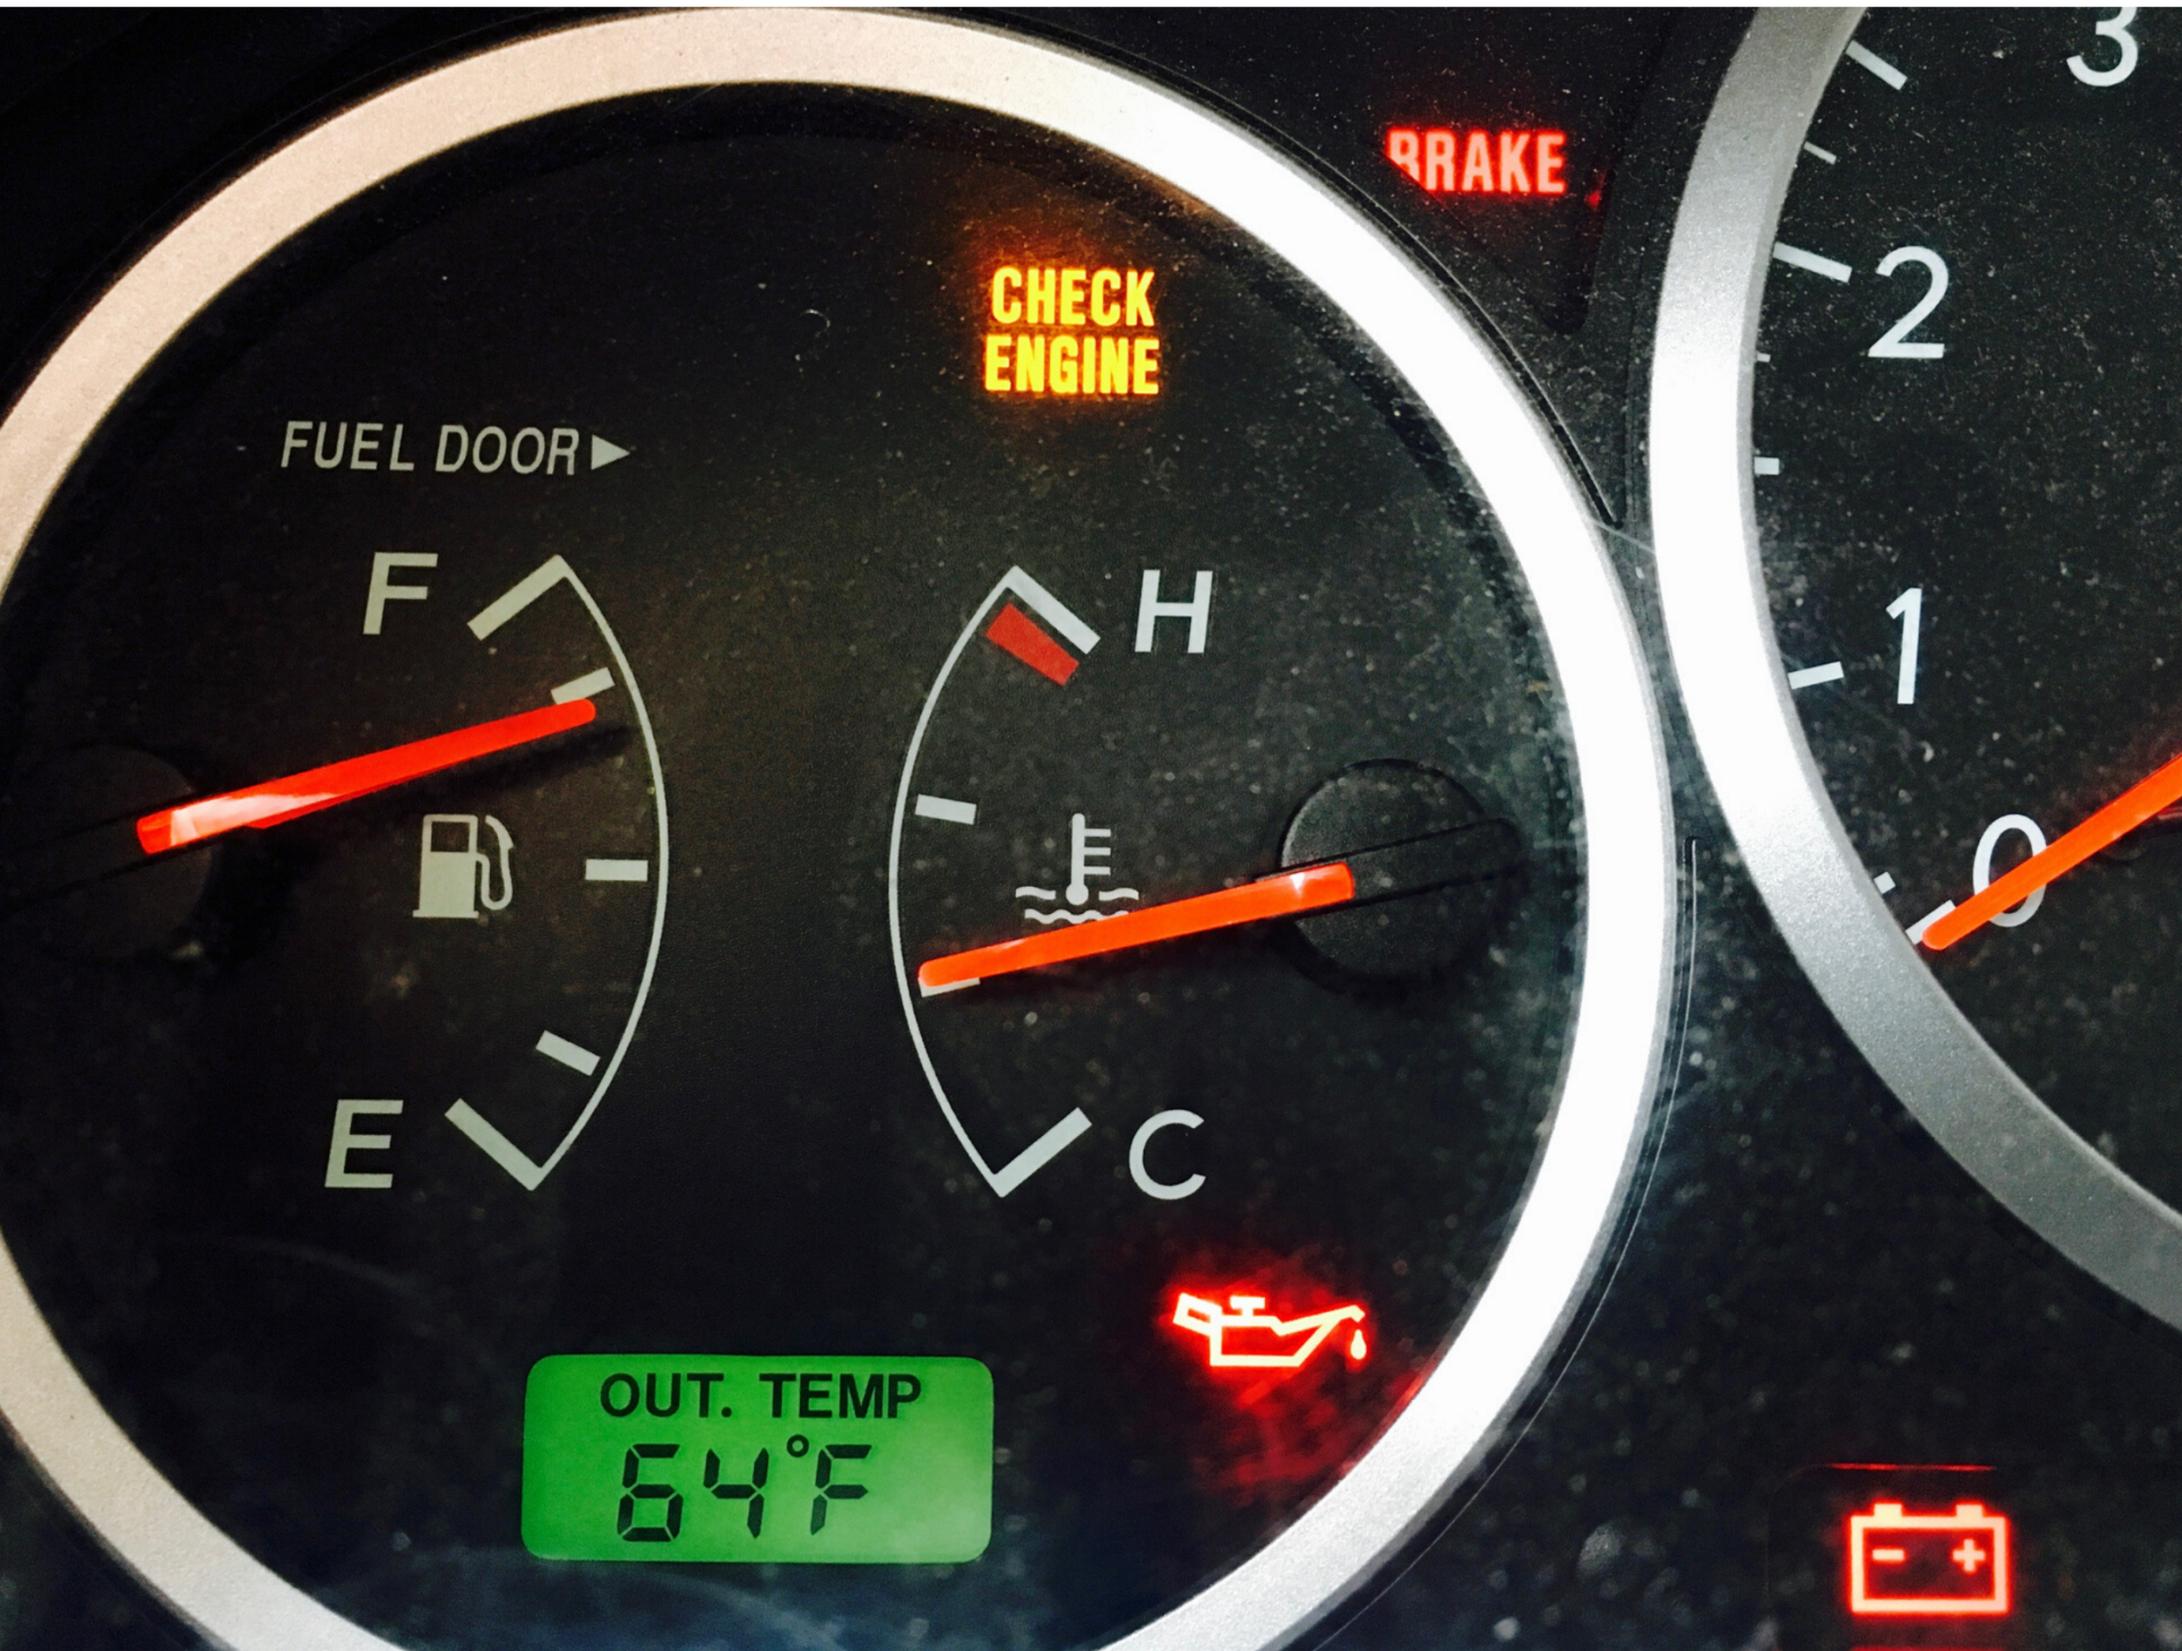

PHARMACISTS CAN PROVIDE PRECISION PATIENT

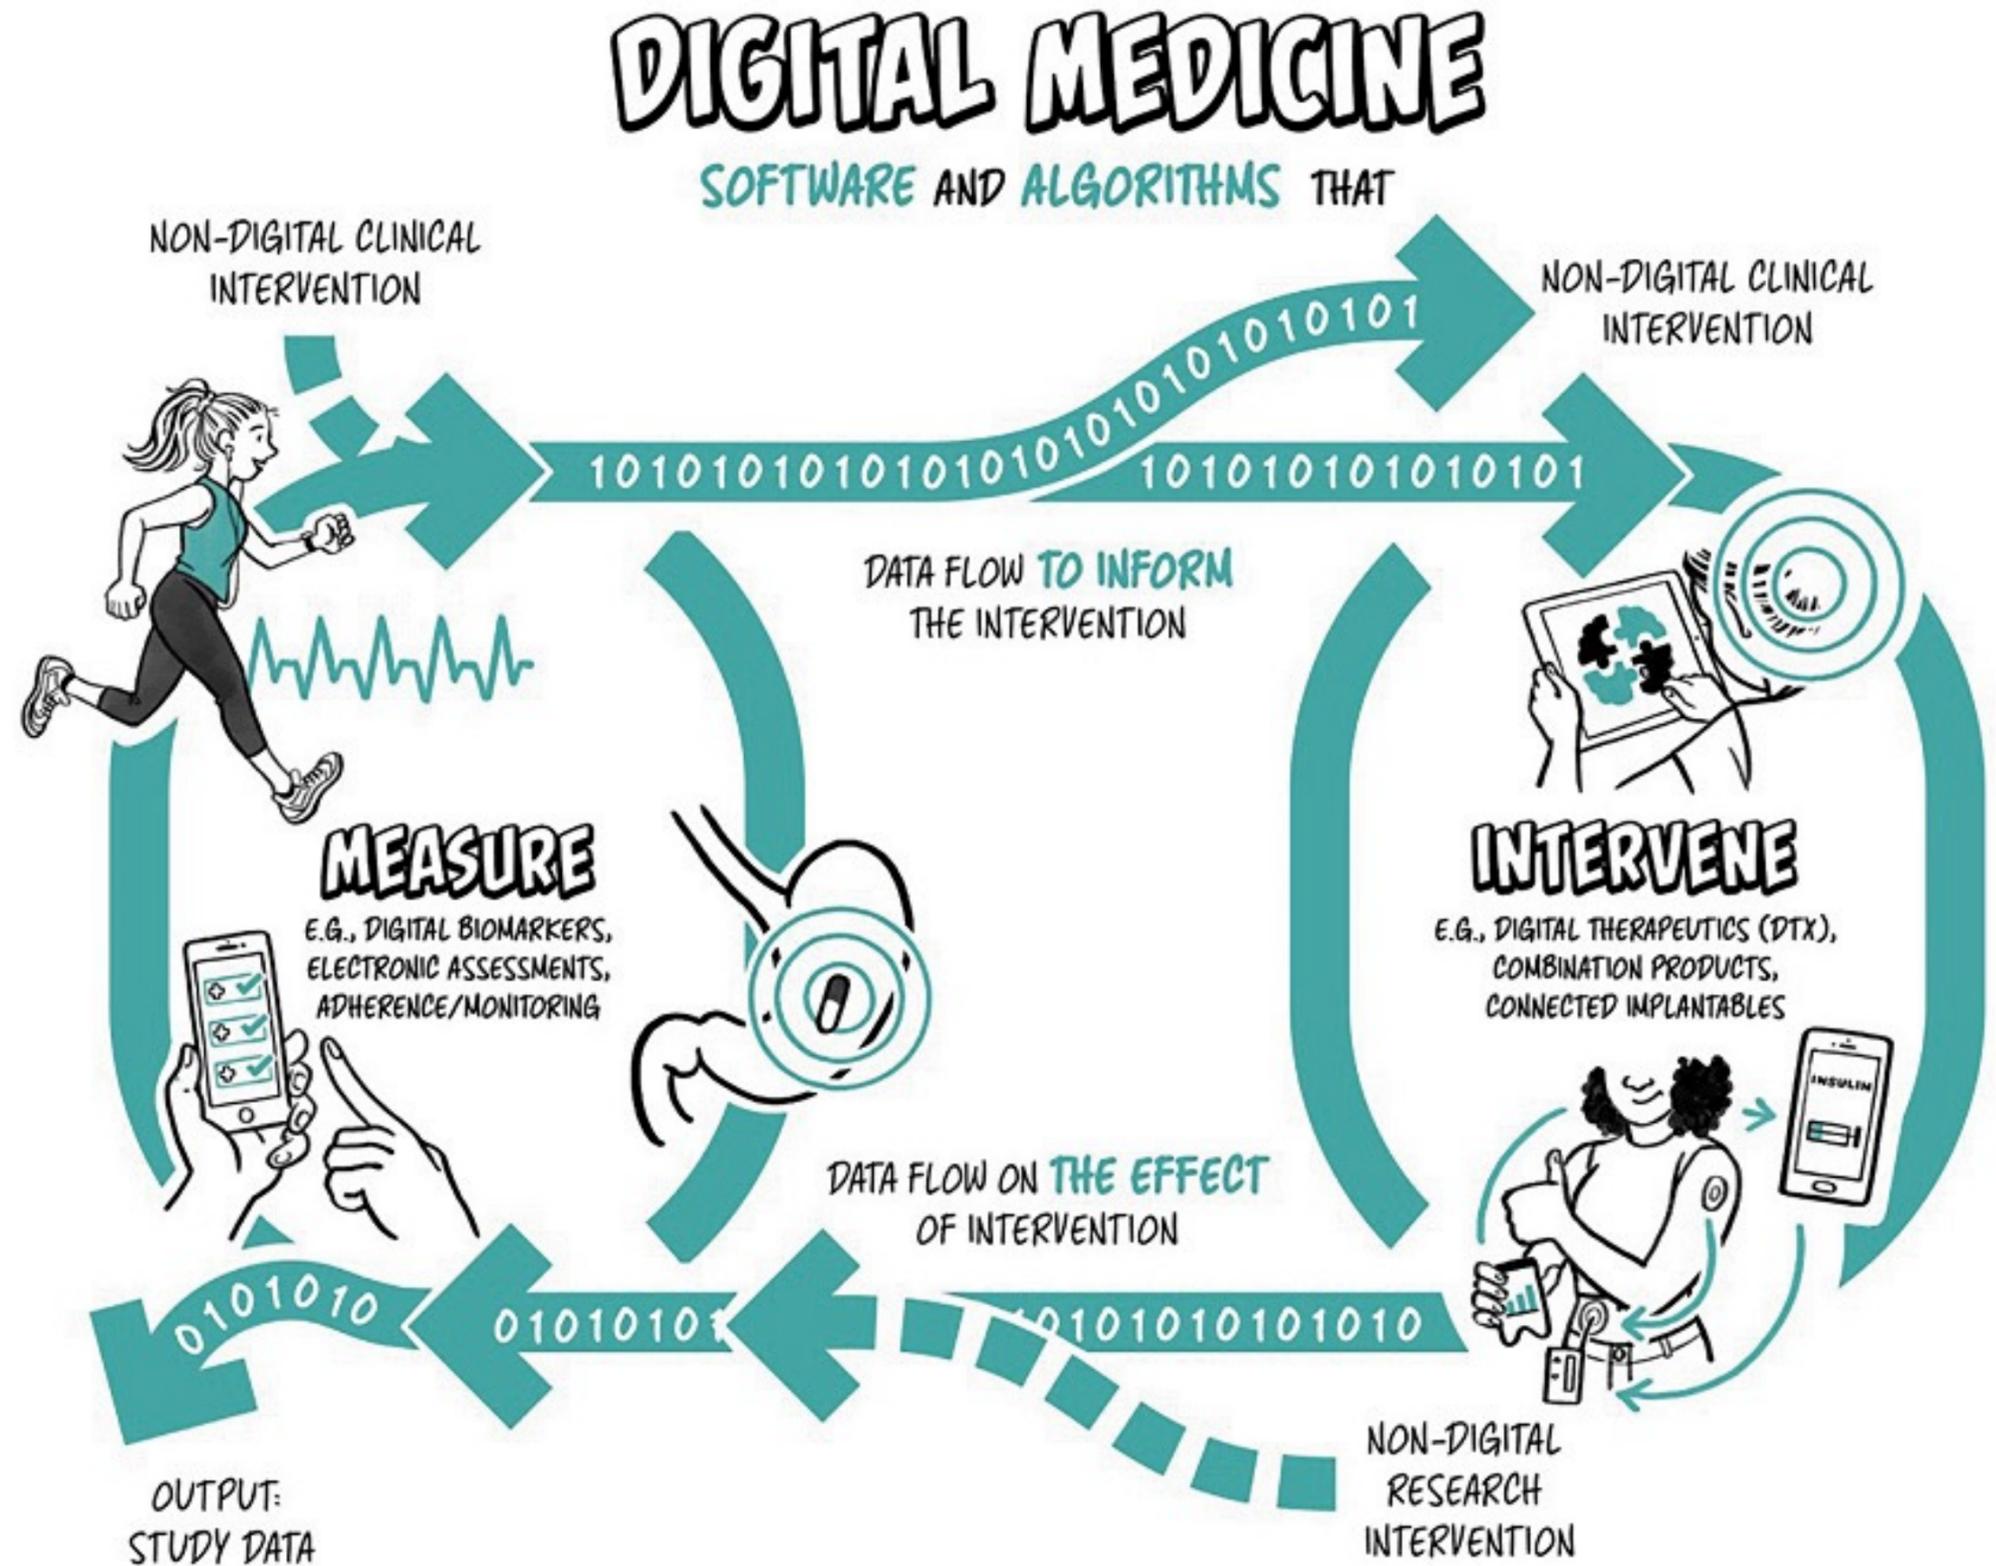

Patients data can now be incorporated based upon multiple collection points to provide better care in real time.

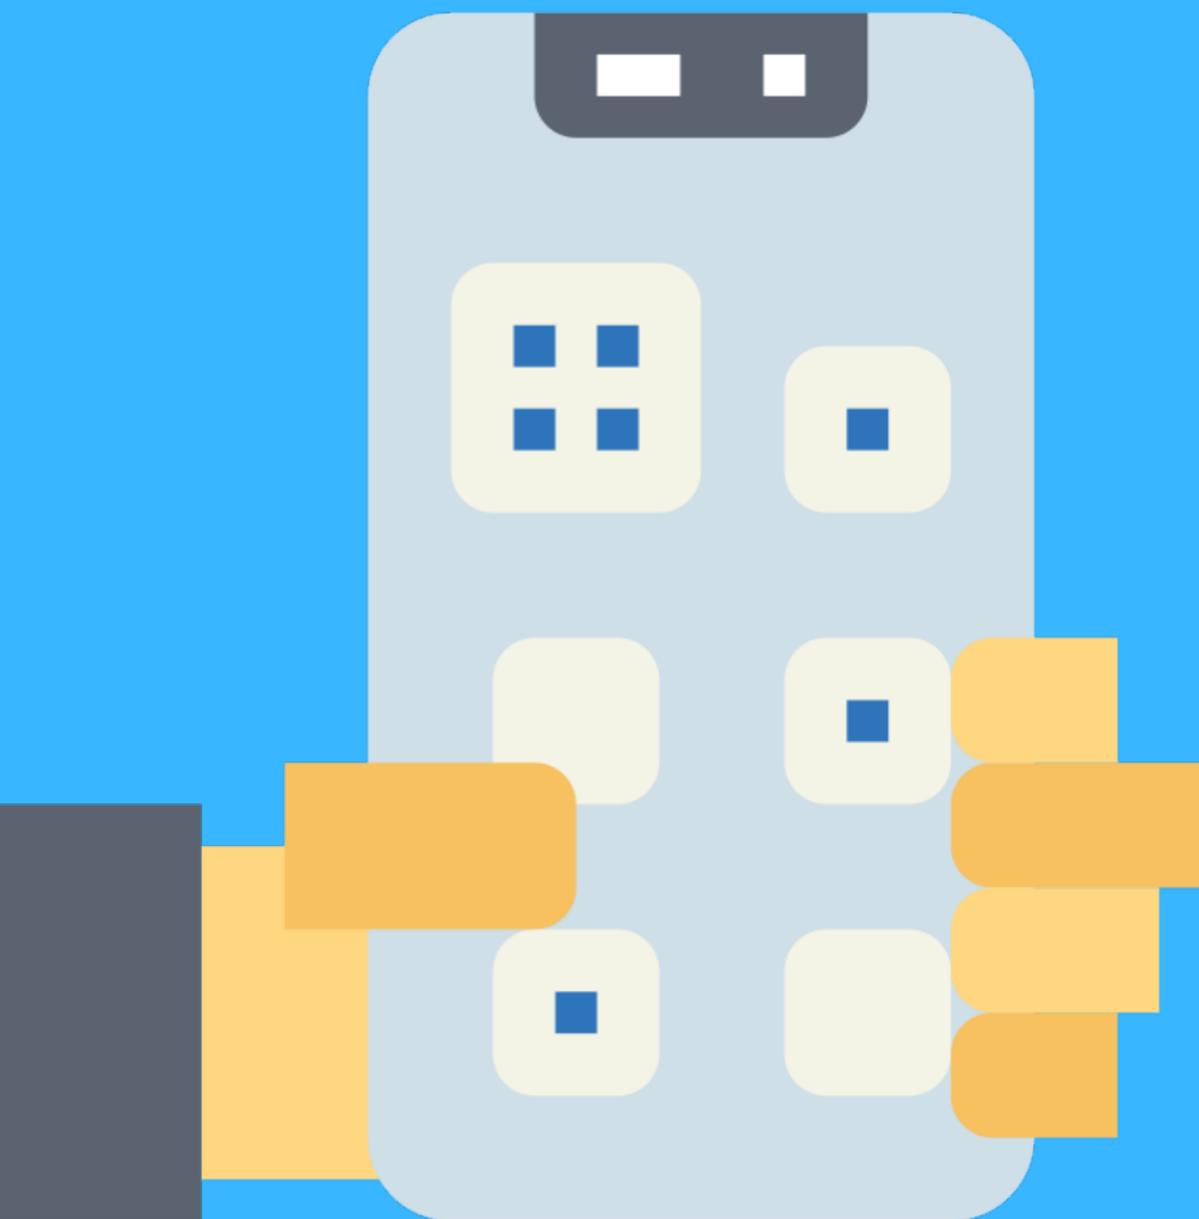

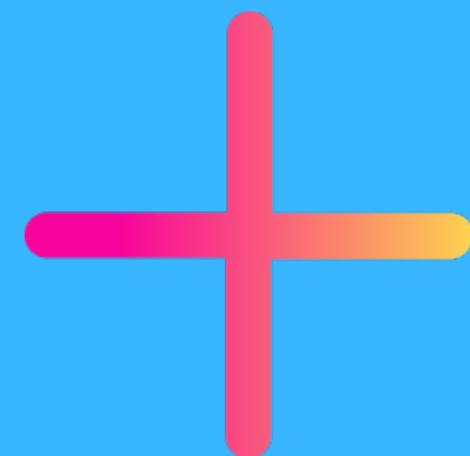

**IF YOUR CAR
CAN ALERT
YOU WHEN
SOMETHING IS
WRONG, WHY
NOT DO THE
SAME WITH
YOUR
HEALTH?**

The goal of all this technology is to have it work in the background of our lives and only intervene when needed most.

**WHO SAYS IT'S
JUST DRUGS THAT
CAN OFFER
TREATMENT?**

DIGITAL HEALTH

DIGITAL MEDICINE

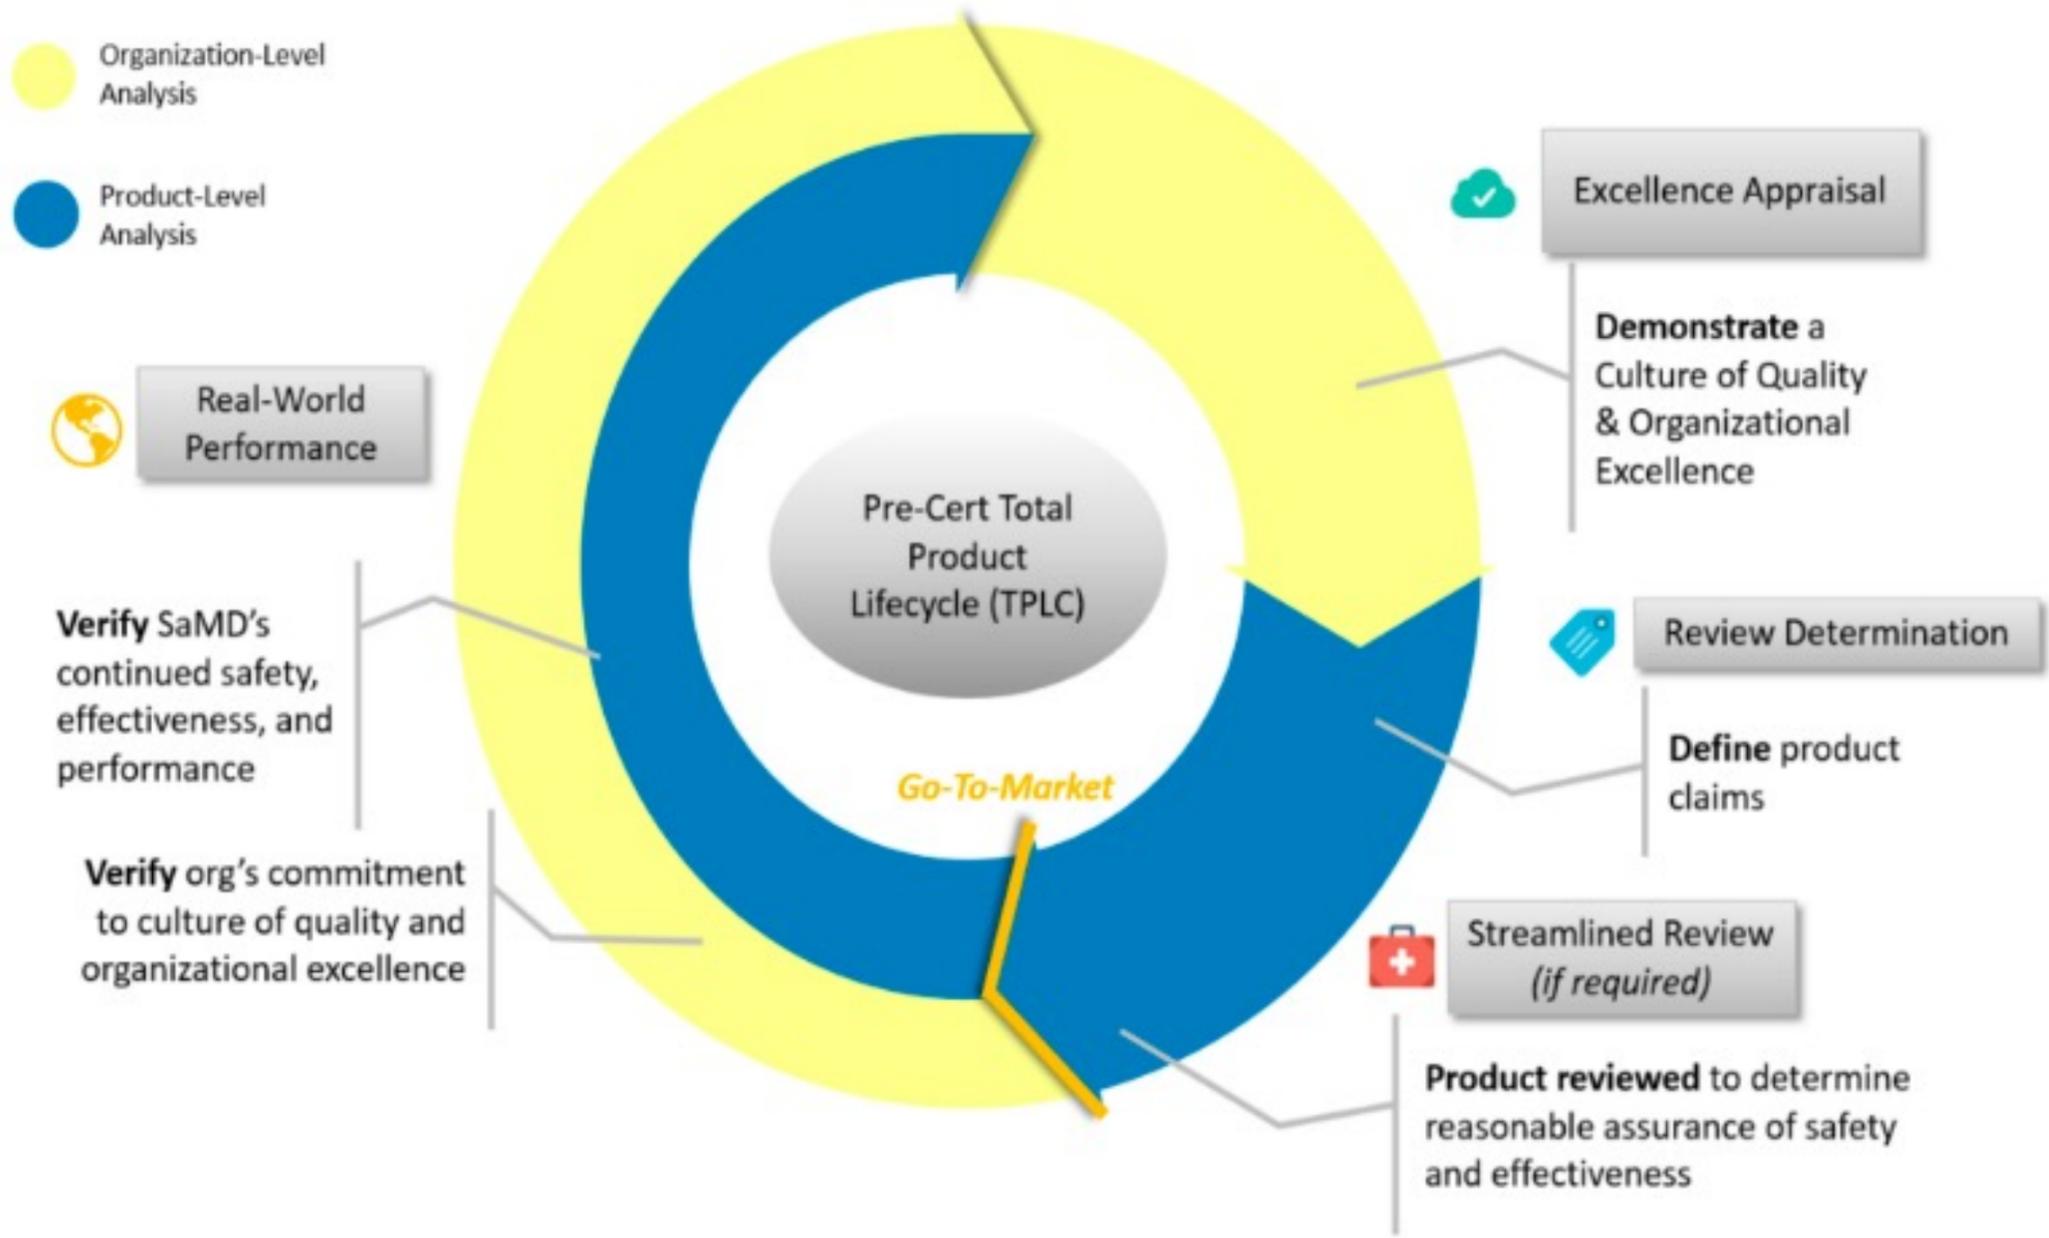

DIGITAL THERAPEUTICS

	DIGITAL HEALTH	DIGITAL MEDICINE	DIGITAL THERAPEUTICS
DEFINITION	Digital health includes technologies, platforms, and systems that engage consumers for lifestyle, wellness, and health-related purposes; capture, store or transmit health data; and/or support life science and clinical operations.	Digital medicine includes evidence-based software and/or hardware products that measure and/or intervene in the service of human health. ¹	Digital therapeutic (DTx) products deliver evidence-based therapeutic interventions to prevent, manage, or treat a medical disorder or disease. ²
CLINICAL EVIDENCE	Typically do not require clinical evidence.	Clinical evidence is required for all digital medicine products.	Clinical evidence and real world outcomes are required for all DTx products.
REGULATORY OVERSIGHT	These products do not meet the regulatory definition of a medical device ³ and do not require regulatory oversight.	Requirements for regulatory oversight vary. Digital medicine products that are classified as medical devices require clearance or approval. Digital medicine products used as a tool to develop other drugs, devices, or medical products require regulatory acceptance by the appropriate review division.	DTx products must be reviewed and cleared or certified by regulatory bodies as required to support product claims of risk, efficacy, and intended use.

1 <https://www.dimesociety.org/index.php/defining-digital-medicine>

2 <https://www.dtxalliance.org/dtxproducts/>

3 It is important to check with local regulatory requirements in each jurisdiction the product is manufactured, registered, or used in.

RESET & RESET-O

DTx platform for management of substance use disorder and opioid use disorder. First FDA cleared DTx platform in the US. Used conjunctively with pharmacological therapy to help manage patients goals. Data collected from patients through mobile software then used in patient care plan by their provider.

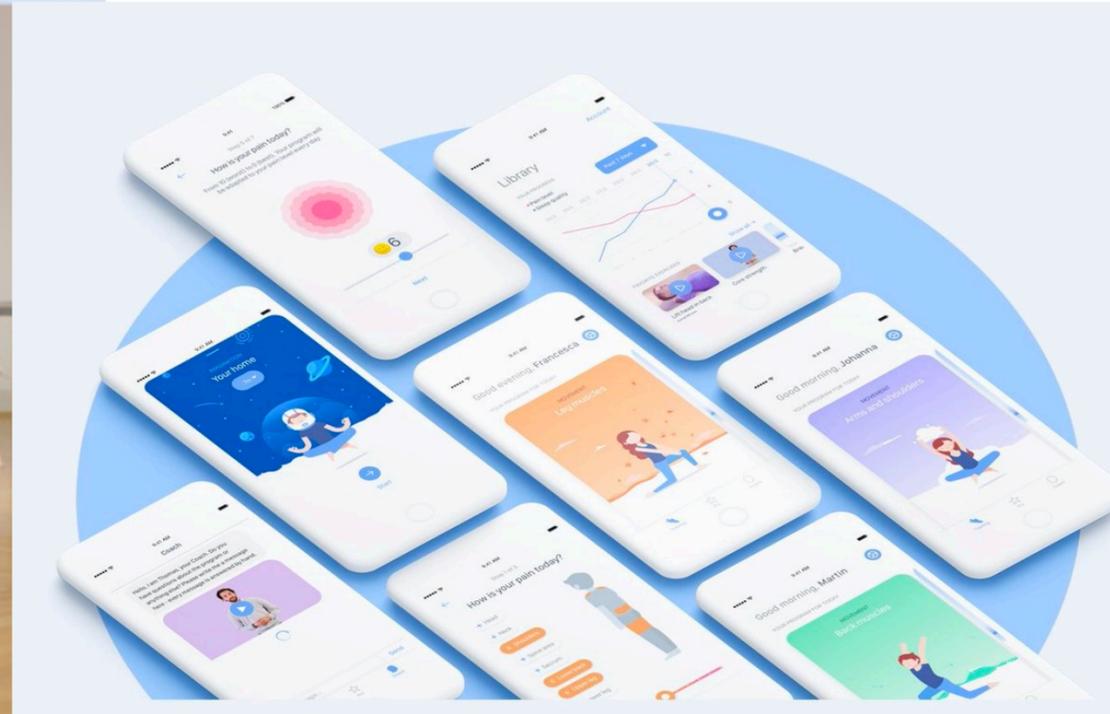

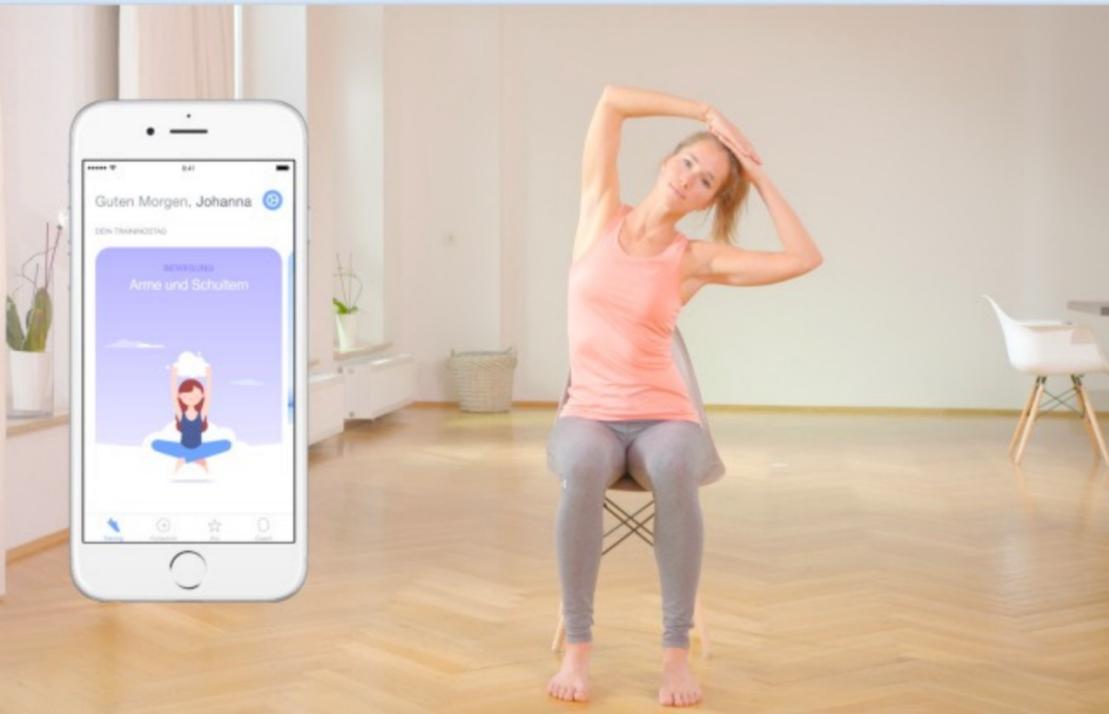

INSULIA

Platform for patients with type 2 diabetes. Collects data on blood glucose trends. Provider sets up the software goals for the patient. Patient is instructed via app how much insulin to use. Provider remotely follows data and augments care plan as needed.

- Gives BG trend data to providers
- Personalized treatment plans
- Personalized dose recommendations for insulin
- Remote patient coaching

Voluntis. Available at:
<http://www.voluntis.com/en/news/news-1/news-1/voluntis-fda-clearance-and-ce-mark-for-insulia>

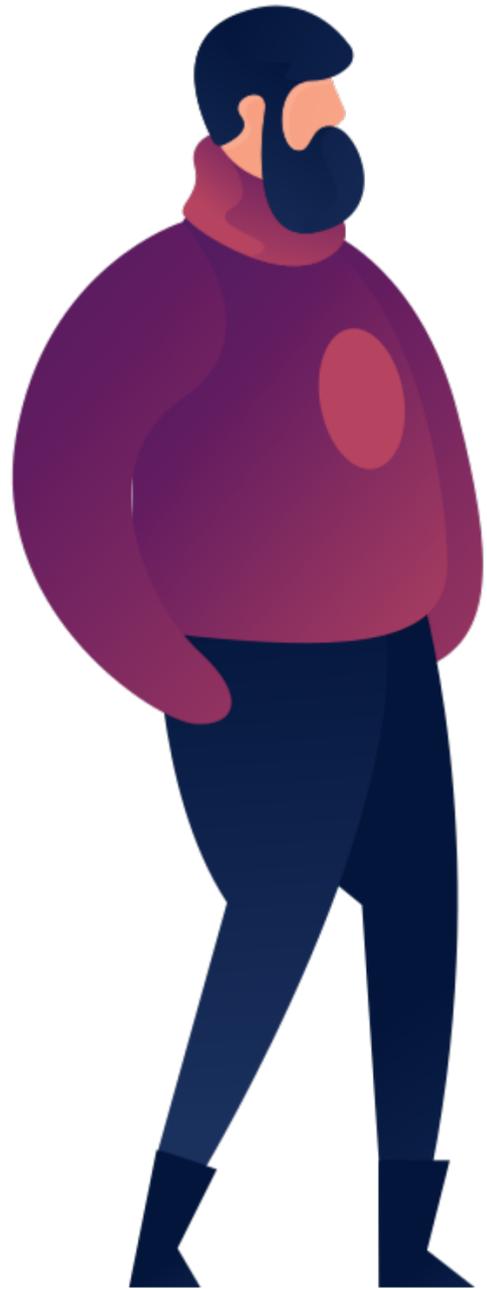

Kaia

Platform for chronic pain management, focused on lower back pain. Recent study highlights as effective as physical therapy (*superior to physiotherapy*) for treatment and will likely extend further for DTx interventions.

Toelle TR, Utpadel-fischler DA, Haas KK, Priebe JA. App-based multidisciplinary back pain treatment versus combined physiotherapy plus online education: a randomized controlled trial. NPJ Digit Med. 2019;2:34.

DIGITAL HEALTH GUIDED MEDICATION MANAGEMENT

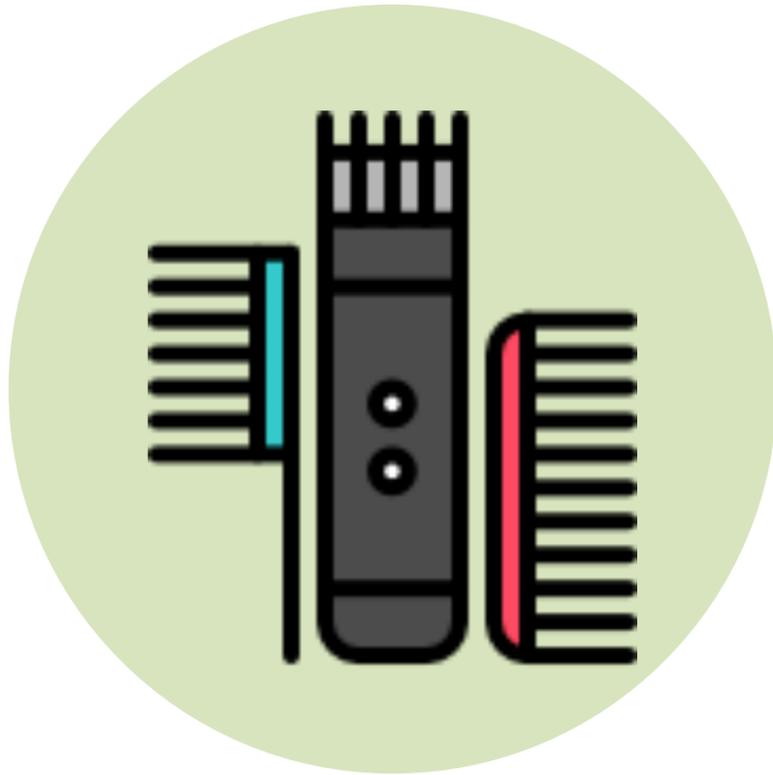

Where can wearables and devices help meet clinical endpoints?

TheDigitalApothecary.com

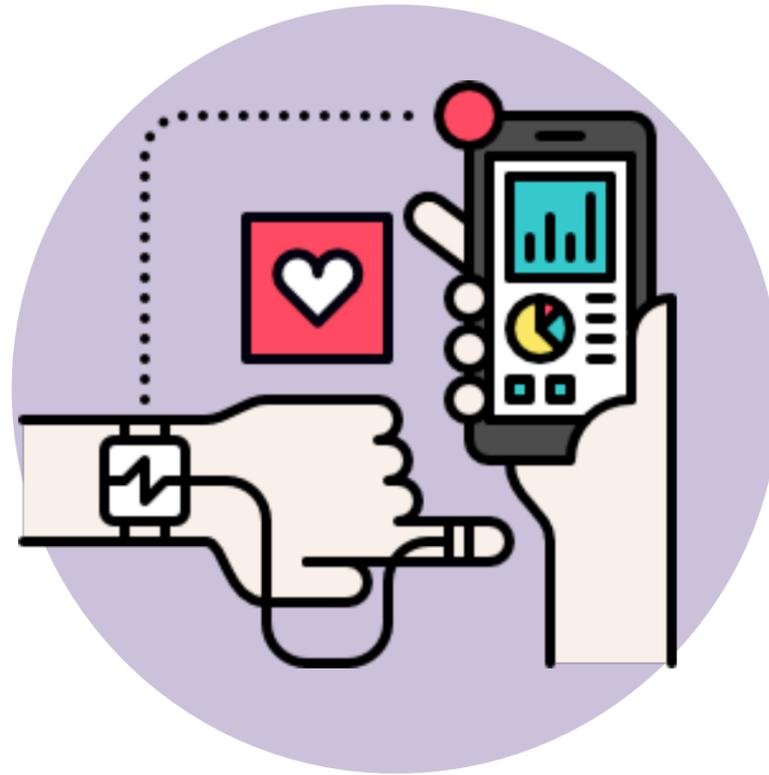

Not all medications initiated can be quantified on clinical outcomes via objectively measured patient status points in the home setting (yet), but many clinically relevant points are slowly being tackled with novel technological creations. This document outlines example classes of medications and sample digital health solutions that may help move patient measurements into the home and out of the clinician office space.

BARBERSHOP STUDY

Pharmacists with collaborative practice managed and reduced BP in a vulnerable population through targeted population interventions and social connections.

Victor RG et al. NEJM.
2018;378(14):12-91-1301.

24-HOUR BP MONITORING

Blood pressure assessment in the ambulatory setting were more accurate in predicting mortality rates and tracking BP variabilities than reliance on in-clinic BP assessments.

Banegas JR et al. NEJM.
2018;378(16): 1509-1520

PHARMACIST BP STUDY

Pharmacists with collaborative agreements managed BP remotely through ambulatory BP assessments and reduced BP in patients.

Margolis KL et al. JAMA.
2013;310(1):46-56.

devices that
patients now
trust
everyday.**

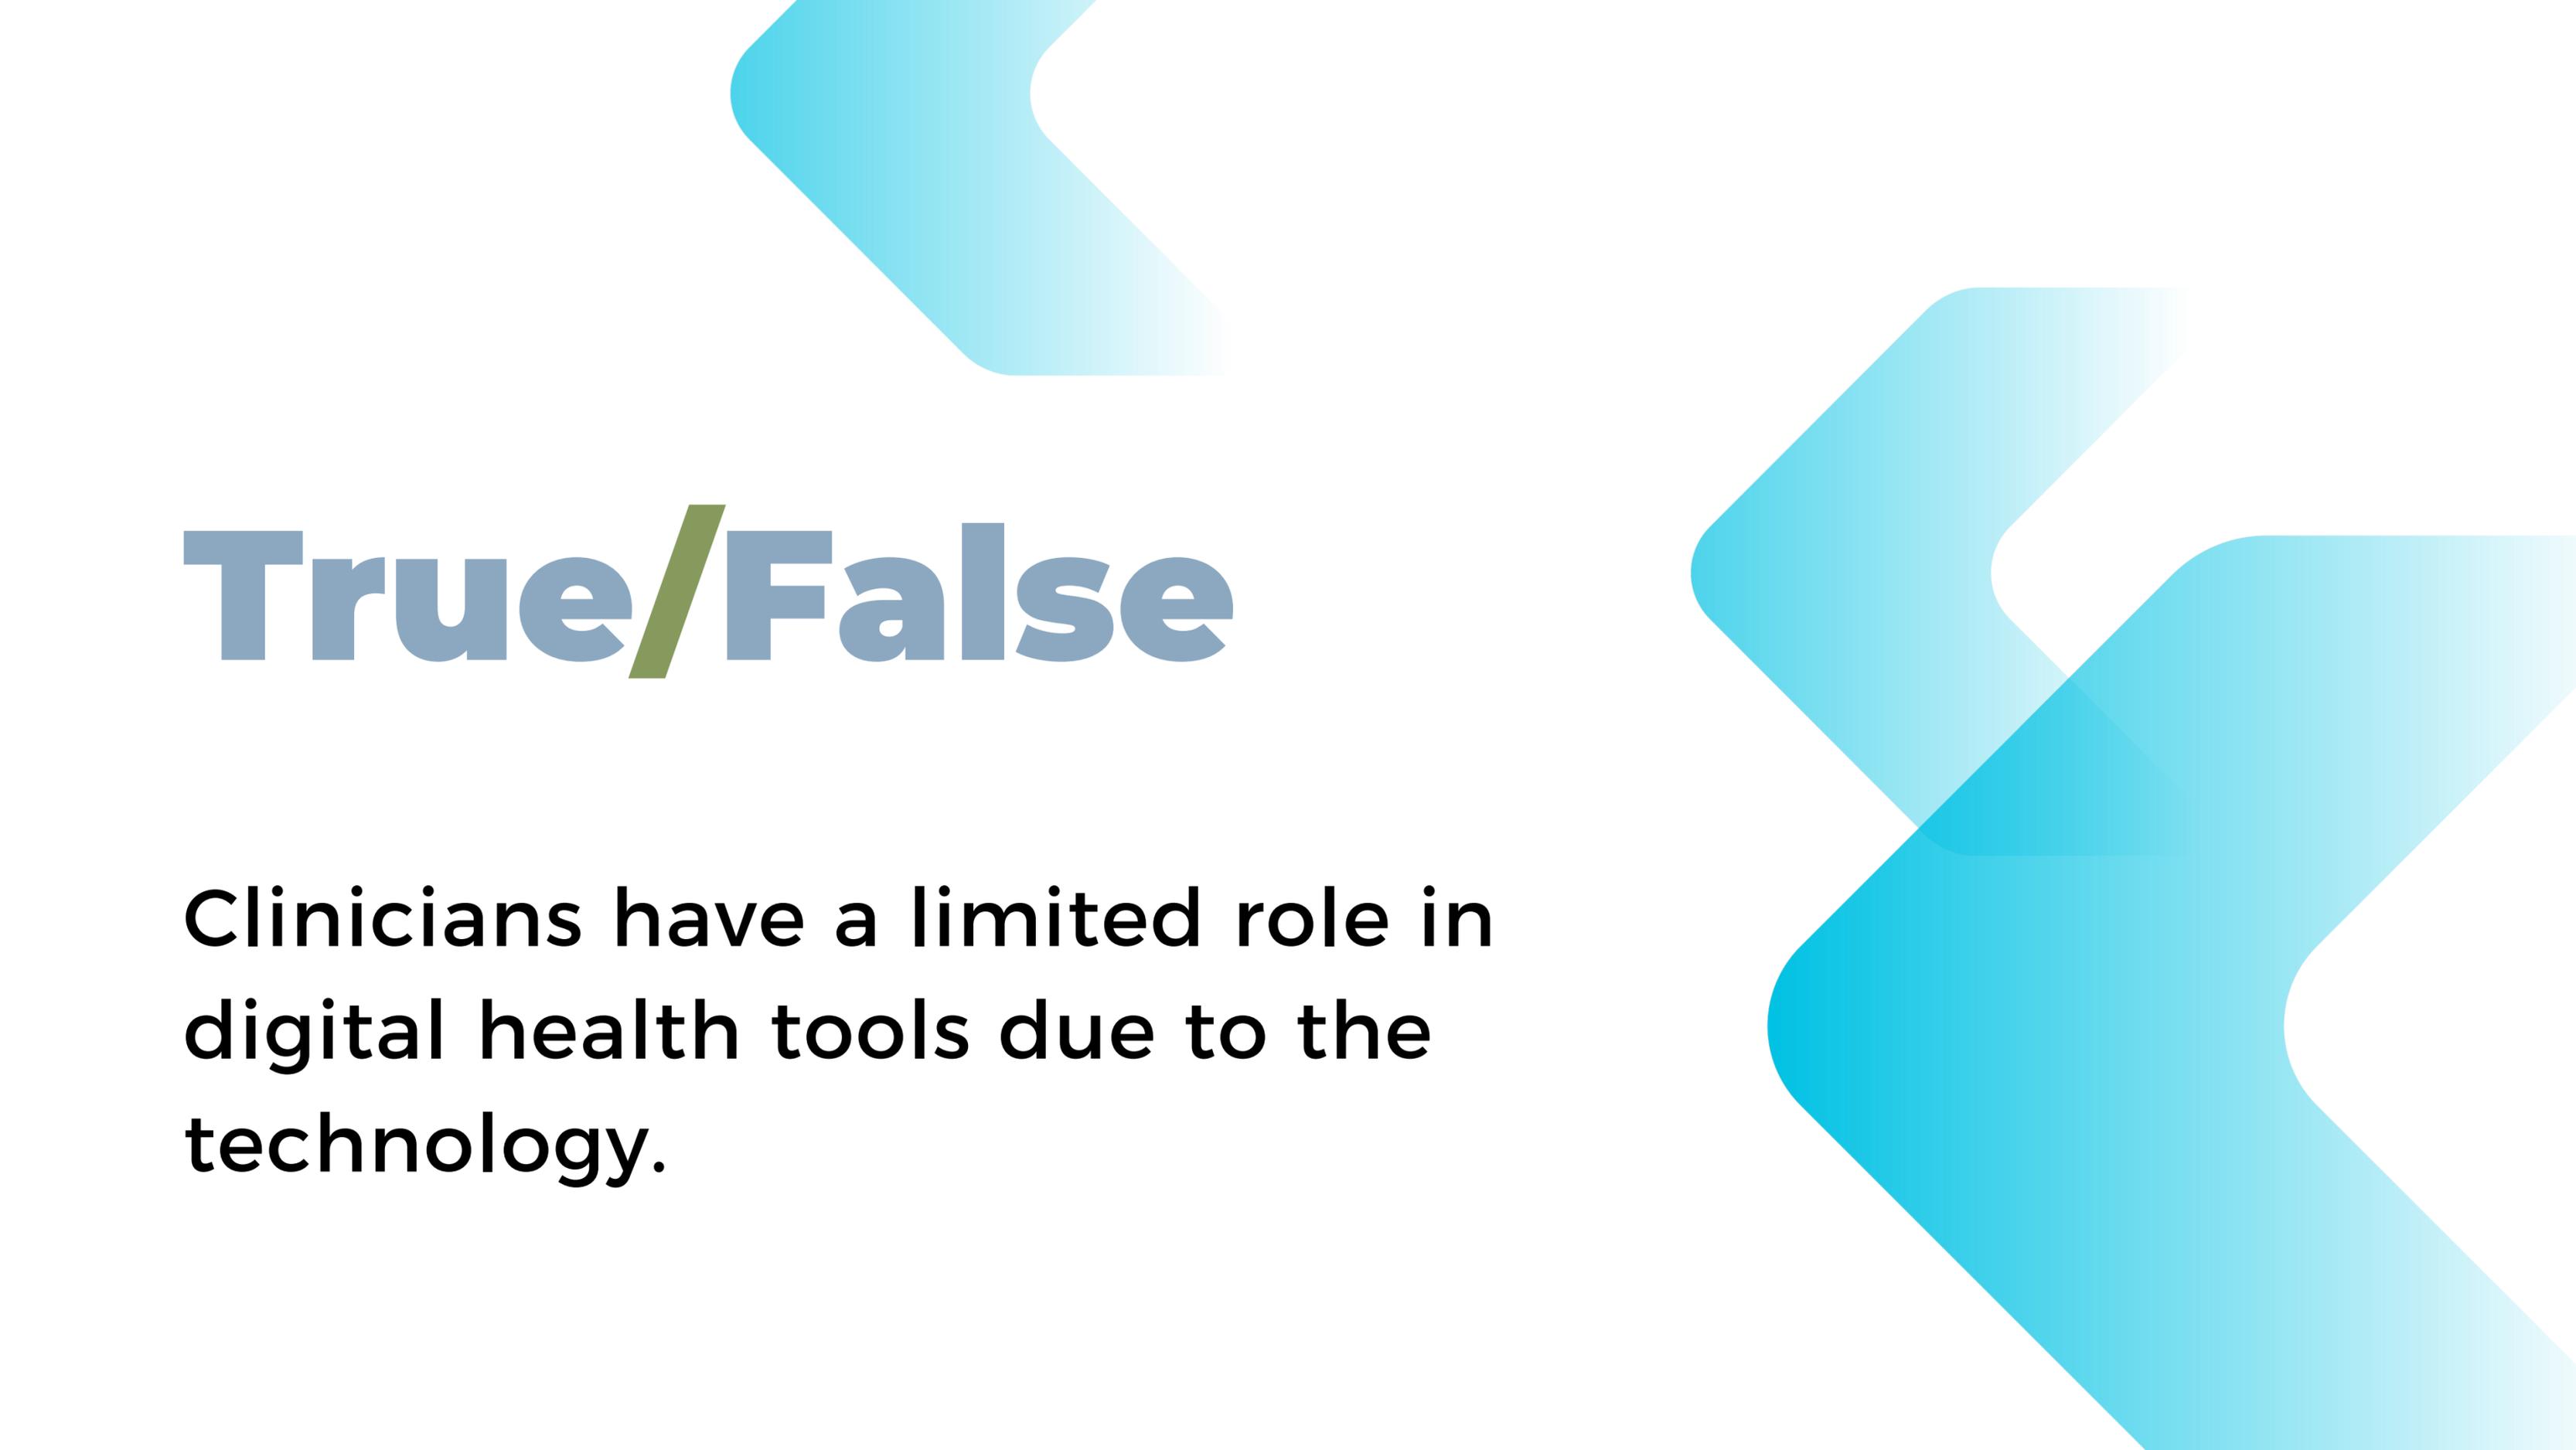

**DIGITAL HEALTH EVENTUALLY
JUST BECOMES A
PART OF HEALTH CARE...**

**...AND IF PHARMA IS "THINKING
BEYOND THE PILL," THEN
PHARMACY WILL HAVE TO
"THINK BEYOND THE FILL."**

Which of the following statements is most correct about digital health in the current United States healthcare landscape?

- a) Payers are the key user group that lead technology development
- b) Digital health takes many forms based on the settings and users
- c) The advances of technology always match the clinical needs in practice.
- d) There is no guidance or regulation surrounding digital health tools

True/False

Clinicians have a limited role in digital health tools due to the technology.

Patient Case

JC is a patient of yours recently discharged from the hospital for a heart failure exacerbation and you have been following their weight and blood pressure readings from their bluetooth enabled blood pressure cuff and scale.

What type of digital health activity are you performing?

- A. Remote Patient Monitoring
- B. Adherence tracking
- C. Disease Driven Monitoring
- D. Continuous BP Tracking

What is a potential role for pharmacists in a digital health enabled health team?

- a) Provide patient education on utilization of DTx products
- b) Help the team select digital health products for patient care
- c) Review data from patient use of digital health products to guide therapeutic care
- d) All of the above
